OSH Barometer

## The comprehensive visual platform for occupational safety and health information in the EU

The OSH Barometer is a data visualisation platform, offering an overview of the state of occupational safety and health (OSH) across Europe. Based on statistics, surveys and public data from EU and national sources, this public hub gives access to a wealth of information on the OSH environment, practices and legislation – easy to grasp, visualise and compare.

## What's in it for me?

The OSH Barometer allows for an easy exploration of the OSH situation in Europe through a set of indicators, covering a range of aspects, such as:

- generic information on OSH authorities, data on economic and sectoral structure, and workforce profiles;
- strategies and regulations;
- working conditions, prevention and OSH culture;
- occupational accidents, diseases and general workplace wellbeing; and
- aspects of OSH legislation enforcement and competent enforcement authorities.

Users can easily visualise the information of their choice, compare results with other countries or EU average, check yearly variations, view the main indicators as infographics, generate customised graphics, download detailed national or topic-specific reports and share content directly on social media.

This public information system is managed jointly by the European Agency for Safety and Health at Work (EU-OSHA) and the European Commission's Directorate-General for Employment, Social Affairs and Inclusion (DG-EMPL).

**The OSH Barometer offers comprehensive, reliable, up-to date information on the state and trends of occupational safety and health across all European countries**

## Related publications

Several publications are derived from the OSH Barometer, including the '[Occupational safety and health in Europe - state and trends](#)' report, which provides a comprehensive overview of the state, trends and contextual developments of OSH in Europe. After delving into the data collection methodology, it offers invaluable insight into the policy implications for improving OSH.

Stay informed about the latest OSH developments, identify areas for improvement and benchmark your country's performance at:
