Foreword

I am pleased to present EU-OSHA's Programming Document 2024-2026. This is the first Programming Document after the Management Board of EU-OSHA appointed me to the post as Executive Director of EU-OSHA in October 2023. I appreciate the trust and expectations that this appointment entails and I look forward to working closely with the Management Board and other EU-OSHA stakeholders in order to improve occupational safety and health in the EU.

The Programming Document 2024-2026 addresses the key current challenges to occupational safety and health. Recovering from the Covid 19 pandemic and improving preparedness for future similar scenarios as well as managing the green and digital transitions in a fair way are high on the agenda. EU-OSHA is strongly engaged in all these areas. However, these challenges have to be tackled without losing sight of well-known occupational safety and health problems.

In 2024 we will initiate a process that leads up to a new EU-OSHA Strategy. The current strategy has been in place for a number of years and has been a good framework for the programming of EU-OSHA's work. However, important changes have happened and are happening. We have to analyse these changes in order to assess the impact on EU-OSHA and its work. This had to be done knowing that resource limitation will become increasingly important in the near future. It is therefore necessary to discuss with the Management Board and other stakeholders where the priorities should be in the future to ensure the continued high relevance of EU-OSHA and its work.

One of the things that will not change is EU-OSHA's close collaboration with its stakeholders. I look forward to working with these stakeholders in implementing the work programme for 2024, in particular EU-OSHA's unique focal point network and its tripartite Management Board.

William Cockburn Executive Director

Mission and vision statement

When EU-OSHA was established, with the adoption of its founding regulation in 1994¹, it was with the aim of providing the EU bodies, the Member States, the social partners and those involved in the field with useful technical, scientific and economic information relating to safety and health at work. This aim has guided the work of EU-OSHA since then, and also provides the framework for the EU-OSHA Strategy and the SPD. The continued relevance of the aim set for EU-OSHA in 1994 was confirmed in 2019 with a new founding regulation, which kept the original mandate that has also provided a very effective framework for responding to the Covid 19 pandemic.

In order to fulfil the aim defined in its founding regulation, EU-OSHA collects, analyses and disseminates technical, scientific and economic information on occupational safety and health.

To ensure a clear focus for its activities, EU-OSHA's Management Board has defined the Agency's mission and vision within the framework of the founding regulation. The mission and vision statements guide the planning process to ensure that the resources available contribute in the best possible way to achieving the aim set out in the founding regulation. The EU-OSHA Strategy and the current SPD are based on a solid analysis of lessons learnt so far by the Agency and also of an analysis of the challenges ahead. A clear objective is to stress the Agency's facilitator role in information development and exchange, and to cover the active role of the Agency in communication and networking. In line with this, the Agency also wants to stress the important role that intermediaries play in its work.

Upon publication of the new EU OSH Strategic Framework, an assessment was made which concluded that the Agency's mission, vision and strategic goals continue to provide a good basis for EU-OSHA's contribution to the new strategic framework.

The **mission** describes the purpose of EU-OSHA. The statement makes clear what the Agency provides to its users, and informs internal and external stakeholders about the overall goal of the Agency:

We develop, gather and provide reliable and relevant information, analysis and tools to advance knowledge, raise awareness and exchange occupational safety and health (OSH) information and good practice which will serve the needs of those involved in OSH

The **vision** defines the ultimate goal for the strategy period (2022-2027):

To be a recognised leader promoting healthy and safe workplaces in Europe based on tripartism, participation and the development of an OSH risk prevention culture, to ensure a smart, sustainable, productive and inclusive economy

While the mission and vision statements define the content and purpose of the Agency's work, the **values** set out the way that EU-OSHA operates:

Pan-European

We create European added value by bringing together actors from across Europe and by providing the tools to create a common approach to occupational safety and health while respecting national specificities

Relevant

We ensure that our activities are relevant to the most pressing OSH needs in Europe and contribute to the realisation of wider EU policy objectives

Tripartite

We work on the basis of, and promote, tripartism as the cornerstone of our work

¹ Council Regulation (EC) No 2062/94 of 18 July 1994

Partnership- and network-based

We participate in and connect networks and build communities to create European added value

Reliable

We see the quality assurance of our work as a key condition for success

Responsive and innovative

We are responsive to new OSH developments and innovative in addressing them

Good governance

We place great importance on accountability and transparency towards our stakeholders and efficiency in the use of our scarce human and financial resources

In 2024, EU-OSHA will initiate discussions on a new EU-OSHA Strategy.

Section I – General context

1.1 **General Context**

Role of EU-OSHA

EU-OSHA works to make European workplaces safer and healthier. To do this, the Agency promotes a culture of risk prevention to improve working conditions in Europe. Through its various networks EU-OSHA collects, develops and communicates data, information, and knowledge to the various stakeholders. The range of stakeholders is wide - covering policy-makers, social partners, OSH professionals, authorities and others.

Policy context

The work of EU-OSHA strongly contributes to the realisation of EU policy objectives. The role played by EU-OSHA in the past has been documented on several occasion and it continues to be a key aim of the SPD to make sure that the work of EU-OSHA addresses the most important EU policy priorities.

Workers' right to a high level of protection of their health and safety at work as well as well-adapted work environments is made clear in Principle 10 of the European Pillar of Social Rights and OSH is defined as one of the key elements in ensuring fair working conditions2. The Pillar of Social Rights has been followed up by an action plan³ which turns the 20 principles into concrete actions. The action plan highlights the importance of digitalisation for occupational safety and health. The most significant output from the action plan in this context is the EU Occupational Safety and Health Strategic Framework ('the Strategic Framework') from 2021.4

The Strategic Framework sets the EU OSH priorities for the years 2021-2027 and therefore fully covers the current SPD. Three key priorities are identified:

- 1. anticipating and managing change in the context of green, digital and demographic transitions;
- 2. improving the prevention of work-related accidents and diseases, and striving towards a Vision Zero approach to work-related deaths;
- 3. increasing preparedness to respond to current and future health crises.

The strategic framework requires the cooperation of everybody concerned, but EU-OSHA is one of the main actors in realising the framework.

A cross-cutting priority is improving OSH in micro, small and medium-sized enterprises (MSMEs). The need to address the specific needs of MSMEs is a theme in the strategic framework and the role of EU-OSHA in providing tools and guidance to, particularly, MSMEs is highlighted. The needs of MSMEs are integrated across EU-OSHA's activities where relevant, but the Online Interactive Risk Assessment Tool (OIRA) is one of the main examples of a tool that directly supports MSMEs in improving OSH.

One of the recurrent challenges identified is the digital transition and its impact on the workplace. Whereas digitalisation brings a number of opportunities, there are also risks and it is stressed that high safety and health standards must be maintained. EU-OSHA will continue to raise awareness about these issues based on the work carried out in the framework of an OSH Overview on digitalisation which provides research-based information for the 2023-2025 Healthy Workplaces Campaign 'Safe and Healthy Work in the Digital Age'.

The key challenge of psychosocial risks is being addressed via an OSH Overview which will also contribute to the Commission's mental health initiative. The OSH Overview on psychosocial risks will be followed by a campaign on the topic in 2026-2028. With these activities, EU-OSHA also contributes to the Commission Communication on a Comprehensive Approach to Mental Health from June 2023.5

https://commission.europa.eu/strategy-and-policy/priorities-2019-2024/promoting-our-european-way-life/european-health</sup>union/comprehensive-approach-mental-health en

Other OSH overviews will deal with the health and social care sectors and circulatory diseases. The OSH Overviews will provide research information to, inter alia, policy-makers and researchers on the OSH issues at stake. Two further OSH overviews will be initiated in 2025 on climate change and occupational cancer.

Anticipation of change in the world of work is one of the cornerstones in the Strategic Framework and EU-OSHA's well-established foresight work will contribute to this. Having finalised a foresight study on the circular economy addressing some of the OSH issues related to the green transition, the Management Board decided in June 2023 that the next foresight study will focus on climate change. In 2024 a scoping exercise together with the stakeholders will be initiated.

EU-OSHA has developed a Workers' Exposure Survey on cancer risk factors which will help establish the amount of workplace exposure to cancer risk factors in Europe. This will support the objective of reducing cancer as a cause of work-related deaths. First results are available in 2023 and this will be followed by more analysis and reports in 2024. Later, following a comprehensive evaluation, a decision will be taken on whether to repeat the survey.

2024 will be the year where data is collected for the fourth wave of the ESENER activity. This will be followed by publication of results and secondary analysis in subsequent years. ESENER is already established as the main source for information on how OSH is managed in European workplaces and with each wave more data become available for time series studies.

Through the Online interactive Risk Assessment (OiRA) activity, EU-OSHA together with its intermediaries, provides a tool for employers to carry out a good quality risk assessment thereby facilitating compliance with the legal requirements without compromising the quality of the risk assessment, especially among SMEs. OiRA is explicitly mentioned in different policy documents and is an activity that will be continued throughout the programming period.

EU-OSHA will continue to be involved together with other relevant Institutions and bodies in improving preparedness for future emergencies based on the lessons learned during the Covid-19 pandemic as foreseen in the Strategic Framework.

As foreseen in the Strategic Framework a stocktaking exercise took place in May 2023 to assess the implementation of the strategic framework. EU-OSHA contributed strongly to the exercise, in particular via its OSH Barometer and its report Occupational Safety and Health in Europe – State and Trends 2023. The report will be repeated at regular intervals.

Via its focal point network, EU-OSHA has a strong link to the Member State level allowing information to be collected and disseminated at the national level.⁶ Each focal point manages a national tripartite network involving the main stakeholders. The focal point network is complemented by other networks at European and international levels and leveraging these networks allows EU-OSHA to have an impact beyond the size of the Agency.

To ensure the effectiveness of the network, an active network strategy is required. One of the aims of this networking strategy is to identify and prioritise the needs across the network and to accommodate the variety of these needs through the Agency's portfolio approach. This allows Member States a differentiated participation according to which activities best match their needs and as a result, the Agency can focus resources within each activity in the Member States where the biggest impact can be achieved. It should be noted, however, that all activities always have a strong European dimension. A reflection on how to best develop the focal point network to meet the challenges after the pandemic was followed up by an action plan which is progressing well in terms of implementation.

Close collaboration with other agencies, both within the policy field of employment and social affairs and beyond, will continue to be a high priority. Together with the other agencies, EU-OSHA will continue seeking collaboration where there are benefits for the concerned agencies. This is both the case for operational and horizontal activities.

⁶ In addition to the EU Member States, EU-OSHA has focal points in the EFTA countries and a number of countries involved in the pre-accession programmes.

The SPD is based on the resources outlined in the Multi-annual Financial Framework and expected in the final 2024 budget. Should the final resources available deviate substantially from what has been assumed, there may be a need to revise the SPD.

2024 will see election to the European Parliament and a new Commission. Both of these changes may lead to new direction regarding OSH. EU-OSHA will continue to provide evidence for future policy-making and contribute where it can.

Rationale for the Single Programming Document

The SPD is prepared in accordance with article 6 of EU-OSHA's founding regulation⁷ and with articles 32 and 33 of the Agency's Financial Regulation⁸ which state that the Agency shall have a single programming document containing multi-annual and annual programming taking into account the guidelines set by the European Commission.⁹ The SPD is the key planning document for EU-OSHA.

-

⁷ Regulation (EU) 2019/126 of the European Parliament and of the Council of 16 January 2019 establishing the European Agency for Safety and Health at Work (EU-OSHA), and repealing Council Regulation (EC) No 2062/94

⁸ Available here: https://osha.europa.eu/en/about-eu-osha/what-we-do/how-we-work/finance

⁹ Communication from the Commission on the strengthening of the governance of Union bodies under Article 70 of the Financial Regulation 2018/1046 and on the guidelines for the single programming document and the Consolidated Annual Activity Report. C(2020)2297 final, 20 April 2020 replacing Communication from the Commission on the guidelines for the programming document for decentralised agencies and the template for the Consolidated Annual Activity Report for decentralised agencies. C(2014)9641final, 16 December 2014. The 2020 version of the guidelines have to be applied to the 2022-2024 Single Programming Document at the latest.

Section II – Multi-annual programming 2024-2026

II.1 Multi-annual Work Programme

II.1.1 Multi-annual objectives

Six strategic objectives for six priority areas are defined in EU-OSHA's Strategy 2022-2027. These six strategic objectives were defined on the basis of the mission and vision – see the section the mission and vision – and on the basis of an assessment of the Agency's strengths and of the possibilities for having an impact in different areas. Taken together our objectives implement our mission and vision statements in the best way possible, given the resources that we expect to be available. The relevance of these six objectives was confirmed in an assessment carried out in 2021 upon the publication of the Strategic Framework.

EU-OSHA's six strategic objectives

Anticipating Change

Strategic objective 1: The provision of credible and good quality data on new and emerging risks that meet the needs of policy-makers and researchers and allow them to take timely and effective action.

Facts and Figures

Strategic objective 2: The provision of an accurate and comprehensive picture of current OSH risks, their health effects, and how they can be prevented and managed, to allow a better understanding of these issues among policy-makers and researchers

Tools for OSH management

Strategic objective 3: The provision of relevant tools for smaller workplaces to manage health and safety, and the engagement of intermediaries in the further development and dissemination of these

Raising Awareness and Communication

Strategic objective 4: To get the occupational safety and health message across to multiple beneficiaries by raising awareness about workplace risks and how to prevent them, together with the Agency's intermediaries

Networking Knowledge

Strategic objective 5: Supporting the OSH community through new tools to promote and facilitate the generation and maintenance of a body of high quality knowledge

Networking

Strategic objective 6: To develop and implement networking activities to ensure that the Agency's activities meet the needs of its key stakeholders, to promote tripartism at European and Member State level, and to enable networks to take an active part in the Agency's activities

Performance indicators are in place to ensure that that high quality information is available to monitor the progress of EU-OSHA's work. The indicators are presented in the tables below for the mission, vision and strategic objectives.

For the indicators related to the activities in the work programme, in some cases results are marked as "not available" (N/A) because either it was not possible to survey relevant and informed stakeholders; or, due to the implementation stage of the activity, surveys could not be launched.

Mission and vision indicators

Input/output indicators

Indicators	Target	Measurement and frequency	Latest Results (2022)
Implementation of commitment appropriations	95%	Final committed amount aggregated across all three titles as percentage of total budget/Annually	2022: 99%
Cancellation of payments appropriations	<5%	Total of cancellation of payment appropriations in the budget as percentage of total budget/Annually	2022: 1,6%
Staff capacity	95%	Posts occupied converted into Full Time Equivalents for the reference period as a percentage of available posts in budget/Annually	2022: 98%
Work programme delivery	90%	Share of outputs delivered in the programming year vs planned outputs, calculated on the basis of completion status/Annually	2022: 98% ¹⁰
Outreach capacity of intermediaries through networking	350	Events count across all activities across all priority areas where work of the Agency has been actively presented (policy and workplace practice oriented), either organised by the Agency or organised by others/Annually	2022: 411
Perceived performance	80%	Stakeholders' assessment: survey to Board and Focal Point members – share of respondents who find that the Agency is performing well/Annually	2022: 92%

Quality indicators

Latest **Indicators** Target Measurement, means and frequency Results (2022)80% Relevance to needs Stakeholders' assessment: Aggregate of: a) data from 84% stakeholders' survey and b) data from after meeting and other surveys (aggregate of all activities) who find the Agency's work relevant/Annually EU added value 80% Stakeholders' assessment: Aggregate of: a) data from 87% stakeholders' survey and b) data from after meeting and other surveys (aggregate of all activities) who find that the Agency's work provide information not available at the national level or developed by others/Annually Usefulness 80% Stakeholders' assessment: Aggregate of: a) data from 88% stakeholders' survey and b) data from after meeting and other surveys (aggregate of all activities) who find the Agency's work useful/Annually

-

¹⁰ The work programme implementation score takes into account the delivered unplanned work as a result of upcoming needs and opportunities for collaboration.

Strategic objectives indicators

EU-OSHA measures relevance to needs, EU added value, usefulness of the work and active use of the information and tools produced via regular stakeholders' feedback. By doing this, the Agency intends to obtain a first objective indication of its contribution to the achievement of EU policy priorities on OSH and, more specifically, of the three cross-cutting key objectives outlined in the EU OSH Strategic Framework 2021-2027:

- anticipating and managing change in the new world of work brought about by the green, digital and demographic transitions;
- improving prevention of workplace accidents and illnesses;
- increasing preparedness for any potential future health crises.

Activity typology: Policy-facing

The aim of EU-OSHA's policy facing activities is to provide timely and relevant information to policy makers and policy influencers at European and Member State level so that they are able to take the best, evidence-based decisions. This would include the current activities under Anticipating change, Facts and figures and Networking knowledge. These activities are also aimed at researchers, who may in turn influence policy or may contribute to the development of more effective interventions.

Strategic objective(s)	Indicators	Target	Measurement, means and frequency	Latest Results (2022)
Anticipating change Facts and figures Networking knowledge	Impact on policy	80%	Stakeholders' assessment Aggregate of: a) data from stakeholders' survey (policy-makers) and b) data from after meeting and other surveys who have actively used the Agency's work for at least one purpose	87%

Activity typology: Workplace-oriented

The aim of the Agency's workplace-oriented activities is, through engagement with a wide-range of intermediaries, to raise awareness about workplace risks and how to prevent them and to provide and diffuse relevant tools, particularly for smaller workplaces, to manage safety and health. This would include the current activities Tools for OSH management and Raising awareness and communication.

The aim of workplace-oriented activities is to reach intermediaries as close as possible to the workplace so that EU-OSHA's products influence the behaviour of key actors at that level.

Strategic objective(s)	Indicators	Target	Measurement, means and frequency	Latest Results (2022)
Tools for OSH management Raising awareness and communication	Impact on workplace practice	80%	Stakeholders' assessment: Aggregate of: a) data from stakeholders' survey (workplace intermediaries) and b) data from after meeting and other surveys who have actively used the Agency's work for at least one purpose	84%

Cross-cutting

Strategic objective(s)	Indicators	Target	Measurement, means and frequency	Latest Results (2022)
Networking	Engagement	80%	Stakeholders' assessment: survey to Board/Focal Point members - share of respondents who are satisfied with the level of involvement of stakeholders in planning, implementation and evaluation of the Agency's work	88%

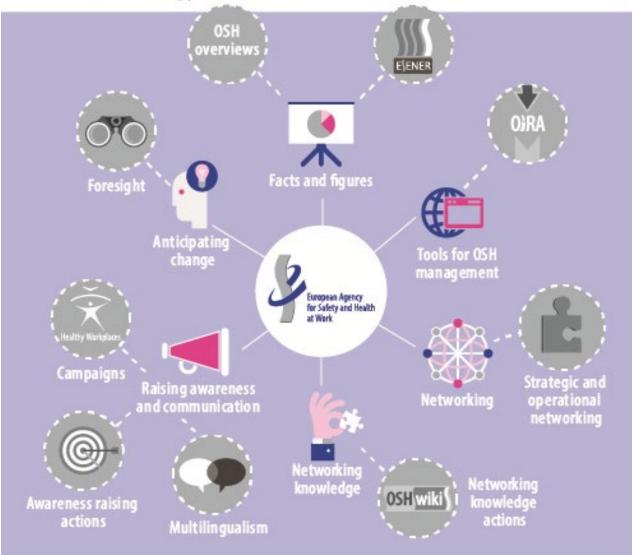

II.1.2 Multi-annual work programme

In this section, the six priority areas linked to the strategic objectives introduced in the previous section are described in greater detail. Under the six priorities, activities are developed as programmed in section III. The current EU-OSHA Strategy covers the years 2022-2027. Considering its strong alignment with the current Strategic Framework, the Agency has based the SPD 2024-2026 on the current EU-OSHA Strategy.

EU-OSHA priority areas and activities EU-OSHA strategy 2022-2027

II.1.2.1 Anticipating change

This priority area involves identifying new and emerging challenges in OSH linked to changes in the world of work, in order to provide policy-makers, researchers and workplace intermediaries with reliable information, allowing them to set priorities for OSH research and actions and to implement timely and effective prevention. As such, it supports the first key objective of the Strategic Framework, to anticipate and manage change in the new world of work. Effective prevention can make an important contribution

to the overall EU policy objectives, such as ensuring that the digital single market fosters jobs that are sustainable and promote wellbeing by offering healthy and safe working conditions. Also, the European Pillar of Social Rights expresses principles and rights essential for fair and well-functioning labour markets and welfare systems in 21st century Europe, such as fostering innovative forms of work that ensure good quality working conditions. The European Commission's Communication 'A Strong Social Europe for Just Transitions' addresses the multiple challenges Europe is facing: climate action, digitalisation and demographic change. Therefore, better risk anticipation is essential for improving prevention and consequently for sustainable working lives and higher employment rates in the medium to long term.

The Agency will carry out foresight studies and will commission articles and reviews on the future of work to continue anticipating new and emerging risks and challenges to OSH. These will cover the drivers of change identified in the Strategic Framework, namely, the green transition and climate change related topics, the digital transition and the demographic transition. The specific benefits that this will deliver include the provision of useful information that will allow policy-makers, researchers and workplace intermediaries more generally, to decide whether to take action and to set priorities.

Foresight activities

EU-OSHA will carry out activities aimed at identifying and addressing future OSH challenges that are likely to result from the changing world of work, such as digitalisation, innovative forms of work and novel employment relations, multiple jobs and worksites; the increased diversity of the workforce; demographic trends; advances in research and innovation; climate change, and changing lifestyles.

EU-OSHA will organise a range of foresight activities seeking to:

- identify and anticipate new and emerging challenges to OSH linked to the changes mentioned above;
- provide instruments for policy-makers, researchers and workplace intermediaries to address adequately the future challenges that are identified; and
- explore how best to transfer the findings from its futures work into policy-making as well as into the setting of priorities for research and action.

Findings from other futures studies (including outside the area of OSH) commissioned by EU, governmental and other organisations will be taken into account, as well as relevant findings from established sources such as Eurofound's European Working Conditions Surveys and EU-OSHA's European Survey of Enterprises on New and Emerging Risks (ESENER). EU-OSHA's foresight will be implemented through a combination of horizon scanning, reviews, qualitative research and consultation exercises (such as interviews, surveys, focus groups, workshops) involving EU-OSHA's stakeholders, key experts from various disciplines and background as relevant. Follow-up or more in-depth work will be done on specific, novel issues by means of expert review articles, reviews or workshops. The implementation and scope of these futures activities will be decided in consultation with EU-OSHA's stakeholders building upon an ex-post evaluation of its previous foresight work.

The Agency will continue to contribute to the European Commission's Strategic Foresight and to the foresight cluster of the EU Agencies' Network on Scientific Advice (EU-ANSA). Furthermore, EU-OSHA will play an active role as a steering group member (together with the European Commission) of the Global Coalition on OSH. It will strengthen cooperation with other bodies carrying out futures work, such as the European Parliament's Panel for the Future of Science and Technology (STOA), the EU Agencies Network of Scientific Advice (EU-ANSA), the Partnership for European Research on Occupation Safety and Health (PEROSH) and the Nordic Future of Work Group.

The findings will be disseminated (through articles, reports, seminars, etc.) to raise awareness of the challenges identified; stimulate debate and support priority setting and policy-making.

II.1.2.2 Facts and figures

Decision-makers need an accurate and comprehensive picture of OSH risks, their health effects, and how they can be prevented and managed in order to set priorities. The Agency's regulation requires it to "supply the EU bodies and the Member States with the objective available technical, scientific and economic information they require to formulate and implement judicious and effective policies designed

to protect the safety and health of workers". The Strategic Framework highlights research and data collection as a precondition for prevention of work-related diseases and accidents and highlights its importance for evidence-informed policymaking. Instruments such as the agency's OSH Overviews, four to five year research-led topic-focused activities, or ESENER, EU-OSHA's workplace-level survey on management of OSH and the new workers' exposure survey on cancer risk factors, aim to contribute to such an evidence base for policy-makers and researchers. Data from these and other sources, such as worker surveys, administrative data and qualitative data, from both the European and national levels also make an important contribution and are the source of indicators used in the EU OSH Information System. Such technical, scientific and economic information can also show the value of OSH to society, by developing for example, estimates of the occupational burden of disease and injury, or the economic benefits of investing in OSH, or highlight opportunities for learning from successful policies, practices and interventions.

The specific benefit of this priority area is the provision to policy-makers and researchers, but also to workplace intermediaries, of the sound and reliable information they need to decide on action. This will be achieved through a series of large-scale comprehensive OSH overviews on specific topics, the continuation of ESENER the EU-OSH Information System (together with the European Commission), and comprehensive analysis of data on workplace exposures to cancer risks factors. These activities contribute to the achievement of the Strategic Framework's Vision Zero approach to work-related deaths.

European Survey of Enterprises on New and Emerging Risks (ESENER)

ESENER contributes to an evidence base for policy-makers and researchers in the field of OSH. The goal for ESENER is to provide a uniquely rich source of data on how OSH is managed at the workplace, with a particular focus on psychosocial risks, on what the needs and weaknesses are, on what motivates and hinders preventive action, and on how workers participate in practice. It provides policy-makers and researchers with internationally comparable information and thereby contributes to the design, implementation and monitoring of effective OSH policies (whether regulatory, guiding or supportive) which assist companies by being comprehensive, targeted, and focused on key issues.

Operating on a five-year cycle, the third survey was carried out in 2019 and a fourth edition is planned for 2024. The survey helps identify factors that encourage preventive measures and those that discourage or impede them, as well as helping to define enterprises' needs according to their characteristics – size, sector, location and age. ESENER-2019 set up a time series, enabling the detection of trends in the period since the previous edition in 2014. The 2024 edition will add further to the possibility to identify trends. With the 2019 edition, for the first time countries that opted for a boost in the national sample size were given the opportunity to formulate up to three questions that would be included in the survey interviews carried out in their country.

Insights into how European workplaces manage OSH and how this is influenced by policy is achieved not only through presentation of the main findings, but also through follow-up studies and secondary analyses, as well as independent research and campaigns that draw on its data. Follow-up studies are carried out in between survey waves covering topics such as the management of OSH, drivers and barriers, and the importance of worker consultation and participation, or focusing on specific economic sectors. As many of the issues explored in ESENER are closely linked with the context in which enterprises operate, ESENER also contributes to the evaluation of both the EU and national OSH strategies, by providing an additional indicator for monitoring the state of OSH. By making the comprehensive data that it captures available to researchers, ESENER encourages further independent research and contributes to knowledge development.

The Agency will continue to develop synergies using ESENER data together with data from other relevant surveys, such as the EU Labour Force Survey and the European Working Conditions Survey.

OSH overviews

The aim of the OSH overviews is to provide policy makers, researchers and intermediaries with useful high-quality information on policy, research and good practice, including examples and recommendations of what constitutes good strategies and practice, in order to help them to better guide decision-making and prioritise resources at policy, research and company level.

Large-scale OSH overview activities of four to five years' duration address different risks, sectors and workers' groups focusing on key OSH issues, such as effective risk prevention in MSEs, work-related diseases, such as MSDs and psychosocial risks, factors affecting compliance with OSH regulations and digitalisation. The scope of these activities is determined in consultation with EU-OSHA's stakeholders and some provide content for a subsequent Healthy Workplaces Campaign on the same topic ensuring a solid knowledge base for the campaigns. OSH overview activities include the collection, analysis and dissemination of comprehensive information regarding policy, research and good practice. They typically deliver an overview of policies and strategies; trends in exposures, workers' groups at risk and safety and health outcomes, as well as of the monitoring tools that are available and of the research needs. They contribute to the development and sharing of good practice, both at the level of policy and of workplace intervention, which can provide content for campaigning activities. Depending on the focus and scope of the project, they involve a combination of literature reviews, case studies, and interviews with key people at policy, research or company level, focus groups, workshops and seminars. The design and implementation of new OSH overviews has benefitted from the recommendations and findings from an overarching evaluation that has been carried out in 2020 targeting precisely the format of the OSH overview. Furthermore, an important input to the selection of future topics are the priorities in the new EU OSH Strategic Framework. A new OSH Overview will start in 2024 - on Circulatory diseases. Further OSH Overviews are foreseen for initiation in 2025 and 2026.

Workers' Exposure Survey on Cancer Risk Factors in Europe (WES)

This activity addresses an important information gap relating to occupational exposure to cancercausing factors. Based on the Australian Work Exposures Study, this survey will provide data that are complementary to those from existing sources, such as national surveys and information available from national administrative sources. Upon completion of the first edition of the survey in 2023, the Agency will carry out in-depth follow-up analysis to support the research community and policy-makers with evidence-based, cross-country input.

EU OSH Information System

Initiated by the European Commission under the previous Strategic Framework, the Agency launched the OSH Barometer in 2020. The agency manages this comprehensive visualisation tool for qualitative and quantitative data, ensuring data quality in cooperation with key data providers and stakeholders in close collaboration with EU institutions and Member State Contact Points. As part of the activity, the Agency will publish further periodic 'Occupational Safety and Health in Europe – State and Trends' reports, based on the collected data. The first edition of this report was issued in 2023 as a key input to the stocktaking summit in May. The OSH barometer will also help monitor progress in implementation of the EU Strategic Framework.

II.1.2.3 Tools for OSH management

The Agency's founding regulation emphasises the need for "methods and tools for implementing preventive activities, paying particular attention to the specific problems of small and medium-sized enterprises". Risk assessment is the cornerstone of health and safety management and OSH legislation, but its implementation and quality need to be improved: evidence 11 shows that there are major shortcomings in complying with essential elements of EU health and safety legislation, particularly among SMEs and especially in micro- and small enterprises. The Strategic Framework emphasises the importance of developing tools for improving the application of EU law, especially in small enterprises. It is essential therefore to provide tools for smaller workplaces to manage health and safety, and the Agency does so through its Online interactive Risk Assessment (OiRA) tool and related knowledge-sharing actions. The OiRA tool has tripartism at its core through its involvement of the social partners, as well as governments, in its development and dissemination.

Development and promotion of the Online interactive Risk Assessment (OiRA) tool

OiRA will be expanded with additional modules, dedicated to specific risks (similar to the Covid-19 module developed in the first semester of 2020 as part of the Agency's response to the pandemic) and complemented by the development of specific tools to enable effective follow-up of risk assessment,

¹¹ EU-OSHA 2018, "Safety and health in micro and small enterprises in the EU: Final report from the 3-year SESAME project"

with the implementation of practical solutions. OiRA tools help micro- and small organisations to put in place a risk assessment process, and support them in general risk management – from the identification and evaluation of workplace risks, through deciding on and taking action, to monitoring and reporting. Tripartism will remain a key factor in the development and promotion of the tool.

The success of online tools depends not only on their usefulness in supporting risk assessment, but also on target users being aware that they exist and on there being a supportive context, such as involvement of the labour inspectorate. The Agency will further build on its promotion support based on a toolkit and pilot projects demonstrating the implementation of successful communication and promotion strategies and further its efforts to see OiRA embedded in national OSH strategies and legislation and promoted in other relevant areas such as vocational education.

Through the activities of its IRAT¹² network, the Agency will continue to facilitate the exchange of knowledge and good practice in the design, implementation and promotion of tools such as OiRA among national authorities that have developed similar initiatives.

The Agency will continue to facilitate the development of more risk assessment tools at both the national and EU levels, focusing particularly on the needs and challenges of MSEs. Responding to the need identified in the Strategic Framework, the Agency will encourage EU and national partners to develop OiRA tools for the health care sector.

To do so, EU-OSHA will further encourage EU and national (sectoral) social partners and other organisations (such as Government Ministries, Labour Inspectorates and OSH institutes) to develop and share their national or pan-European sectoral OiRA tools, and to put in place a (national) overall strategy, action plan or legislation to encourage companies to use the tools that have been developed. Collaboration with the social partners will ensure that the OiRA tools that are developed meet the real needs of small organisations in a particular sector. Therefore, social partner 'ownership' of the tool is crucial in encouraging widespread take-up and use of the tool at enterprise level. In addition to the dissemination strategy, 'peer-to-peer' communication is essential to encouraging the use of OiRA tools in Europe's micro- and small enterprises.

The outcome at company level should be an increase in (especially micro- and small) companies carrying out their own, good quality and up-to-date risk assessments. This will help them to manage OSH efficiently and reduce administrative burdens, helping to improve productivity as well as OSH. The outcome for workers should be that they are properly involved in risk assessment and that the risks in their workplaces will be adequately assessed and managed. The outcomes for these beneficiaries are expected to be sustainable over the longer term. Better OSH in MSEs, and fewer work-related accidents, cases of illness and related absences from work, are part of the expected long-term outcomes.

II.1.2.4 Raising awareness and communication

Getting occupational safety and health information and messages across to multiple target groups and beneficiaries ¹³, including policy-makers, researchers, social partners and others, and raising awareness about workplace risks and how to prevent them, are key elements in the creation of a prevention culture which is integral to the Strategic Framework's Vision Zero approach. The Agency's intermediaries and beneficiaries are varied, and its communication activities have to take account of this. It is self-evident that the requirements of communicating on future risks to policy-makers are different from those of communicating simple steps to prevent accidents to intermediaries.

The Agency's communications and promotion actions together with the Healthy Workplaces Campaigns play an important role in reaching this goal by delivering reliable and relevant information, tools and other resources generated by the Agency's research activities to the different target groups, primarily policy-makers, intermediaries and other message multipliers, with the ultimate aim of benefiting people in European workplaces. A wide range of different types of information is developed by the Agency and has to be communicated. Consequently, the Agency relies on a network communications approach and

-

¹² Interactive Risk Assessment Tool

¹³ **Beneficiaries** are those whom an activity is designed to support or help. The Agency, in most cases, does not work directly with beneficiaries but with others (**target groups or intermediaries**) who are in contact with or can influence the beneficiaries. The Agency, in most cases, aims at increasing the capacity and understanding of target groups (e.g. by providing them with tools) for them to better help and support beneficiaries.

the communication channels that we use need to be adaptable. The content of the communication can range from complicated statistical analyses to simple good practice guidance. National focal points and other partners are key stakeholders in the Agency's communications approach and the Agency invests in capacity building by providing its network of focal points with financial and logistical support for implementing campaign and awareness raising activities at the national level. Agency support covers a wide range of activities, including the organisation of conferences and seminars; press conferences; journalist round tables and visits; as well as the production and distribution of campaign print and promotion material in 25 languages. The Strategic Framework's Vision Zero approach to work-related deaths in the EU is being developed as a transversal theme across the Agency's communications, awareness raising and campaigning actions.

Healthy Workplaces Campaigns

The Agency's founding regulation, articles 1 and 2, refers to EU-OSHA's role in disseminating information, both about risks and about good practices to prevent them, and in carrying out awareness raising and communication activities and campaigns on safety and health at work issues. Successive EU OSH Strategies, including the current one, have also requested the Agency to carry out awareness-raising actions, and in particular to target these at micro, small, and medium-sized enterprises.

All Healthy Workplaces Campaigns are preceded by an OSH overview on the topic and pursue the following goals:

- · Engaging stakeholders at all levels
- Raising awareness
- Providing information
- Developing and providing access to resources
- Encouraging activities which impact on the workplace
- Identifying and recognising good practice
- Sharing and implementing good practice

The Agency's awareness-raising activities give a European dimension to OSH-related work at the national level. They also can help push an issue which would not have been pushed if it was dealt with at the national level alone. The fact that campaign activities take place all across Europe on the same topic helps to create a European identity in OSH.

Healthy Workplaces Campaigns are decentralised campaigns co-ordinated by the Agency, but they can be tailored by our focal points in the Member States, partner organisations and individual workplaces to fit their particular needs and priorities, allowing them to organise their own activities and produce their own materials.

The Agency develops and strengthens the Campaigns' network-based approach, drawing on the support of several important networks of partners, including:

- the Agency's network of national focal points, which is responsible for coordinating the Campaigns at the national level in partnership with their tripartite networks;
- the European social partners, representing the interests of workers and employers at the European level;
- the Agency's networks of official Campaign partners, consisting of pan-European or international organisations, and media partners;
- the European institutions and their networks, in particular the incumbent Presidencies of the European Council, and
- the Enterprise Europe Network, which reinforces the Agency's link with Europe's micro, small and medium-sized enterprises.

Awareness raising actions and communication

Effective communication has a key role to play in the delivery of the Agency's mission, not least in ensuring that its research results reach their target audiences, and as such is very much a part of EU-OSHA's core business. As in other areas of the Agency's activities, networking and partnership are at the heart of our communications approach.

The Agency puts considerable emphasis on optimising its Europe-wide communication network by agreeing with its stakeholders which activities the Agency undertakes and which fall under the remit of the Member States and other organisations. Complementarity is a defining feature of this communication partnership approach and it allows the Agency to leverage its communications actions to reach many more intermediaries across the EU and beyond than might be expected given its relatively small size and limited resources.

The tools successfully developed to promote the 'workplace-facing' campaigns have been adapted to support the promotion and communication of the Agency's other information projects. The Agency will maintain and further develop its communication channels and vehicles. These include the press office including media monitoring and media partnerships; a broad publications, audiovisual and social media programme; stakeholder/customer relations management and distribution and; corporate literature and promotion. The annual activity report will remain the main vehicle for corporate reporting.

The Agency's ICT and online strategy promotes a digital first approach and ensures that usability and user testing are integrated into the development process of its websites, data visualisation tools and other online services. Web metrics are used to monitor the use of the websites and to inform future developments. User satisfaction surveys of our online services will also be carried out periodically. This may take the form of surveys of website or OSHmail users, or user panels recruited for this purpose. Online and hybrid meetings which came to the fore during the Covid-19 pandemic will remain a feature of the Agency's communication and networking activities in the years ahead.

In addition, and alongside its Healthy Workplaces Campaigns, EU-OSHA carries out additional awareness raising actions in cooperation with its network of national focal points as well as more focused promotion and communication activities dealing with specific topics. The latter can be linked to actions by other stakeholders (e.g. the European Commission, SLIC, the EU social partners, and sister agencies). Together, these activities aim to bring information to different beneficiaries and, in particular, intermediaries, and the Agency will continue to explore all possible means to engage with these audiences.

Actions also include the participation of the Agency in the consortium of organisations responsible for the development and production of a series of short films featuring the popular animated character Napo. The Agency will maintain and further develop the Napo website and carry out promotion actions, such as the teachers' toolkit and workplace discussion kits that exploit Napo films to take the OSH message to new audiences.

Other activities will include promotional seminars; participation in events and exhibitions; the organisation of competitions and award schemes, such as the Healthy Workplaces Film Award and associated screenings and debates of winning films; as well as further development of visual communication tools.

Multilingualism

The Agency is committed to supporting multilingualism, and will continue to work with the Translation Centre for the Bodies of the European Union and its national focal points to provide translations of its information and campaign material in up to 25 languages.

National OSH professionals and intermediaries are the Agency's main target groups for multilingual communications. Consequently, it is EU-OSHA's translation practice to translate the core print and online material supporting its Healthy Workplaces Campaigns into 25 languages. However, to maximise the effectiveness of its translation budget and as part of a portfolio approach, the Agency will offer its focal points the possibility to prioritise other Agency publications for translation into their respective languages according to their national needs. These publications will normally consist of shorter documents such as executive summaries of reports and target audiences may include national policy makers.

For text-heavy or regularly updated information products – such as data visualisation tools – where it is economically not possible to translate the contents into all languages, the Agency will continue to develop the use of machine translation tools.

The Agency will also continue to explore and develop innovative approaches to meeting the challenge of communicating in a multilingual Europe. One example is the diffusion strategy for the OiRA tool, through which the Agency provides support and core translations to enable national partners to develop tools in their own languages, and adapt them to their own national context.

II.1.2.5 Networking knowledge

A key role for EU-OSHA is to "collect, analyse and disseminate technical, scientific and economic information" on risks, good practices and research aspects of occupational safety and health. This represents a very broad remit which – combined with different information needs at EU level and across the Member States, the goal of supporting multilingualism, and the ever-growing task of maintaining the currency of the information – represents a considerable challenge, given the resources available. By forging links and facilitating the exchange of knowledge between different organisations involved in research, policy-making and development of resources for workplace level, the agency is able to act as a facilitator and catalyst of new knowledge and collaboration on OSH.

Networking knowledge actions

The Agency will undertake actions to support the generation, exchange and dissemination of knowledge to support its key stakeholders, in particular the EU and member state institutions, in their decision-making, and strategy and policy development and implementation by providing relevant evidence and knowledge exchange.

Actions will reflect and contribute to the agendas of the key stakeholders and it is therefore difficult to predict all of the specific actions that will be undertaken but an illustration of the approach was evidenced in 2020 by the Agency's timely and multifaceted response to meeting the OSH challenges of the COVID-19 pandemic. Ongoing actions include maintaining up-to-date information on EU-OSH legislation, non-binding instruments and dialogue initiatives and on Member States' strategies on OSH. The agency will support the Commission generally and in its follow-up to the ex-post evaluation of the EU legislation on health and safety at work and to its lessons learned exercise of the EU's response to the COVID-19 pandemic.

OSHwiki is maintained as a comprehensive source of reliable up-to-date information that is integrated in the corporate website and as a way to collaborate with the OSH community. EU-OSHA contributes to coordination and prioritisation of OSH research through different actions such as seminars.

In order to strengthen support for micro-enterprises and SMEs, in particular in the implementation of prevention measures following the risk assessment process, the Agency promotes the development and use of 'e-tools'. Either web-based, or running on a computer or mobile device, these are interactive applications that help enterprises improve health and safety. EU-OSHA facilitates the exchange of knowledge and sharing of tools, for example those that have been successfully developed at national level, for uptake across Europe. Preference will be given to tools that support SMEs to take preventive action.

Furthermore, EU-OSHA plays an active role as a steering group member (together with the European Commission) of the Global Coalition on OSH. It will strengthen cooperation with other bodies carrying out futures work, such as the European Parliament's Panel for the Future of Science and Technology (STOA), the EU Agencies Network of Scientific Advice (EU-ANSA), the Partnership for European Research on Occupation Safety and Health (PEROSH) and the Nordic Future of Work Group.

Fostering collaboration between Member States, the agency supports the exchange of experts among member state institutions.

II.1.2.6 Networking

EU-OSHA is a small Agency working with information and knowledge. This makes networking essential for achieving its objectives. Networking activities are a way of ensuring the relevance of the Agency's work and creating a multiplication effect in its implementation. Of particular importance is the tripartite character of the key networks.

The activity in this area mainly meets two needs:

- OSH resources, including both financial and information resources, are spread across Europe.
 As resources are limited, greater efficiency can be achieved by pooling resources and bringing
 about the effective exchange of information and experience. This is clearly recognised in the
 preamble to the Agency's founding regulation.
- In addition, the Agency is relatively small, with under 70 staff members. On its own, the Agency is limited in what it can achieve. However, by engaging networks and ensuring that its work is relevant to intermediaries, the Agency has consistently shown that it can achieve much more. In particular, it is important to build on and support existing tripartite networks.

Strategic and operational networking

The Agency's strategic and operational networking actions include the development and support of its key stakeholder networks: its governance and European networks as well as the focal points, expert and international networks. The actions aim at reflecting the needs and priorities of the key stakeholders in the Agency's activities, and cover both input to EU-OSHA's planning and the Agency's need to account for its actions; and to ensure that the Agency delivers on its objectives by relying on the networks' resources, as the Agency's own resources alone do not allow this. It is also an aim to share best practice and avoid duplication of effort.

These actions are particularly targeted at the Management Board, and EU-OSHA's other key European stakeholders. The governance networks include the Agency's Management Board, Executive Board and Advisory Groups. All these networks involve governments, unions and employers' associations, in addition to the European Commission. The European stakeholders include the EU Institutions and the European level social partners: special emphasis is given to maintaining close cooperation with the Commission's Directorate General for Employment and Social Affairs and other EU agencies via the EU agencies' networks and via direct bilateral cooperation. The strategic networks represent a unique opportunity to engage key players across Europe in the work of the Agency.

Unique among EU Agencies, the focal points, with their national networks, represent the Agency's key operational network. Within the framework of an annual agreement, the focal points coordinate and transmit information to be supplied at national level to EU-OSHA, having taken into account the views of social partners. Thus, each Member State and EEA country have an EU-OSHA focal point which operates a national tripartite network reflecting national systems and structures. This allows the communication of information via the focal points to and from key stakeholders in the Member States. This is a two-way information flow that also ensures Agency activities reflect priorities in the Member States. A particular focus will be the further development and involvement of these national networks. The engagement of social partners at national level is seen as essential in ensuring the success of EU-OSHA activities.

Starting in 2022, the Agency has initiated a major review of the work with the focal point network. This initiative is aiming at ensuring a smooth and effective cooperation ahead of the new challenges in a post-pandemic EU. During 2023 the actions to prepare the network for the new challenges have been thoroughly discussed with the focal points and their implementation is underway.

The Agency will continue to cooperate with other European agencies, to create synergies. Agreements are already established with Eurofound, EIGE, ECHA, Cedefop and ELA¹⁴

EU-OSHA also engages with international network partners, such as the ILO, WHO, SLIC and other international organisations as well as specific countries. The Agency's international activities will be carried out within the framework of its strategy on international relations – see annex XII. The strategy covers issues such as the different types of actors, reasons for engagement, limitations of engagement and the definition of priorities for international actions.

Finally, the continued cooperation with established communication networks such as the Enterprise Europe Network (EEN) and OSHVET will be further developed. The EEN provides a good vehicle for reaching the enterprise level. A similar approach is also being pursued with networks in the vocational education sector as part of the Agency's OSHVET initiative.

¹⁴ The agreements are available here: https://osha.europa.eu/en/about-eu-osha/what-we-do/corporate-strategy-and-work-programmes/cooperation-with-other-agencies

Specific programmes for countries outside the EU

EU-OSHA has implemented several programmes for Candidate and potential Candidate Countries prior to the enlargements from 2004 onwards allowing new Member States to participate actively from the date of accession - or even before. These programmes are financed via earmarked funds and are therefore only included in this document for information purposes.

II.1.2.7 Overview

Activity/year	2024	2025	2026
Anticipating future challenges to OSH – climate change preparedness (ref 1.4)

Networking knowledge actions (ref 5.3)			
Strategic and operational networking (ref 6.4)			

¹⁵ Pending MB's decision on the ex-ante evaluation in December 2023.

¹⁶ Same as above.

¹⁷ The MB agreed in principle on the theme in June 2023.

II.2 Human and financial resources outlook 2024-2026

II.2.1 Overview of the past and the current situation

Staff population overview for N-1 (2023):

The Agency's staff resource as of 1/1/2023 totals 65 posts, comprising 40 TA and 25 CA. The number is expected to remain stable for the period 2024-2026. Within the TA, the Agency requested to change one AST retiring end 2023 by an AD in 2024 to further reinforce the pool of Research Project Managers.

Expenditure for N-1:

Detailed data are provided in Table 1 of Annex III.

II.2.2 Outlook for the years 2024-2026

The Agency is focused on maintaining efficiency gains while continuing to deliver its work programmes with the scarce resources available. For planning purposes, the Agency has been advised by the Commission to assume that there will be continuity in staff resources. EU-OSHA's reputation as a professional organisation is built on the quality of research, networking, promotion and communication activities, which are carried out by its staff. The latter ensures that the Agency's professional reputation is maintained and further enhanced. EU-OSHA's organisational development, together with talent management and workforce planning will focus on improving the effective development and deployment of its staff.

Considering the forthcoming Cybersecurity regulation which introduces an urgent and priority need for resources in this area, having a request for additional resources not been granted, the Agency will strive for finding alternatives including seeking collaboration with other agencies. As regards the new Strategy for the Rights of Persons with Disabilities 2021-2030 which calls the Agency to designate a disability coordinator, the Agency allocated such responsibility to one of its current staff.

EU-OSHA works in close cooperation with its Staff Committee. The Agency consults the committee – amongst others - on implementing rules giving effect to the staff regulations.

a) New tasks

No new tasks were included in the 2019 Founding Regulation of the Agency.

b) Growth of existing tasks

The Strategic Framework includes a number of tasks for EU-OSHA. Among the 'new' tasks are those related to dealing with the consequences of the pandemic in the workplace and contribution to preparedness for future health emergencies. These tasks have to be prioritized within existing resources. In addition and as specified above, strengthening the Agency's capabilities in terms of cybersecurity will require additional effort and capabilities in the interest of the Agency and of EU institutions as a whole.

EU-OSHA's relevance to EU policy-making – as the Strategic Framework confirms - has been growing beyond the pandemic and its consequences, which has led to an increase in requests for support on various initiatives from, in particular, the European Commission. EU-OSHA welcomes this opportunity to provide knowledge for EU policy initiatives, but it leads to an increasing workload and increasing request for expertise which has to be managed and which in some cases may lead to foreseen actions being cancelled or postponed. In order to be able to react to these needs within a reasonable period, a broad range of OSH specialist knowledge needs to be maintained among staff.

Finally, it should be mentioned that evaluations have concluded that the knowledge provided by EU-OSHA scores high on all quality parameters. However, it was also concluded that there was a scope for additional impact of the research work by making more stakeholders aware of the knowledge provided. As a consequence, EU-OSHA decided to increase its effort on communicating and promoting its policy relevant research work. The resources for this effort partly come from extending the HWC cycle from two to three years. In June 2023 it was decided to continue with the three years cycle for the HWC on psychosocial risks starting 2026. No decision has been taken for subsequent campaigns. In addition, the Agency has developed a knowledge development procedure to ensure the quality of its research work and to make it transparent how its research work is done.

It general, it should be kept in mind that EU-OSHA is a highly efficient Agency which has already implemented efficiency measures for a number of years in order to continue to deliver on its mission – also during the 10 percent staff reduction 18. It would therefore be wrong to assume that EU-OSHA's tasks can continue to grow without either additional resources or reduction of the activity level in other areas of its work programme.

II.2.3 Resource Programming for the years 2024-2026

a) Financial Resources

The resources of EU-OSHA comprise mainly contributions from the European Union (96.0%), the EEA-EFTA countries (3.4%) and local authorities (0.6%). The annual subsidy which EU-OSHA may receive as from 2021 is dictated by the Multiannual Financial Framework 2021-2027 which aims to keep control over the evolution of the administrative expenditure and staffing levels of all EU institutions and bodies.

The Multiannual Financial Framework 2021-2027 currently considers an annual flat increase of +/- 2% for EU-OSHA.

The EU-OSHA financial perspective for the years 2024-2026 therefore anticipates an annual EU contribution of 16,790,319 EUR (2024), 17,126,000 EUR (2025) and 17,469,000 EUR (2026). The EEA-EFTA contribution will correspond to a percentage of the annual EU subsidy voted by the Budgetary Authority. For 2024-2026, it is estimated at 3.6% whereas the local authorities are foreseen to contribute with an annual total of 100,100 EUR.

Although the 2,0% increase in the MFF 2023-2027 will be to compensate the potential indexation in prices for running costs, procurement contracts, salaries and yearly reclassification exercises, it is anticipated that the steady increase in prices experienced in the course of 2022 and for 2023 might pose additional strain on the agency's financial resources for the operational activities.

b) Human Resources

EU-OSHA anticipates that its staff resources will continue to remain stable over the period 2024-2026 except for the reduction of one AST9 and the addition of one AD6 (as from 2024) to reinforce the agency's pool of Research Project Managers at adequate level.

EU-OSHA will make use of the opportunity for career development introduced by the Implementing Rule on recruitment of Contract Agents and the newly adopted policy derived from it on exceptional internal selection procedures for Contract Agents. The Agency may continue to launch such procedures on adhoc basis to match available skills with the evolving actual needs of the Agency during 2024-2026. The combination of increased digitalised processes widely implemented at the agency and evolving staff skills and competencies result in a reduced demand of basic administrative support in general. In addition, in its workforce planning exercise, the Agency considers both potential retirement and evolving job profiles needs. All this results inevitably in an increased number of higher function groups and relative decrease of lower ones, as evidenced in Annex IV.

In 2024 therefore, the Agency assumes to continue counting on a number of staff resources totalling 65 staff (40 TA and 25 CA).

Detailed data on staff evolution over the programming period is provided in Table 2 of Annex IV.

According to the Staff Screening Exercise based on 2023 data, the distribution of staff is as follows: 70.2% operational, 20.9% overheads and 8.9% neutral staff.

II.2.4 Strategy for achieving efficiency gains

EU-OSHA continues to seek efficiency gains, building on the findings of the evaluation of its Multi-annual Strategic Programme and the work that followed it (particularly the revised version of the MSP, the EU-OSHA Strategy) as well as the evaluation of the four agencies in the employment and social affairs policy field commissioned by the Commission. The focus on fewer larger activities will continue over the

 $^{^{18}}$ In the previous 2014-2020 Multiannual Financial Framework, the evolution of "cruising speed" EU Agency staffing was based on the objective of cutting Agency establishment plan by 5-10% in order to secure staffing for new Agencies.

programming period and this will contribute to continue high efficiency as regards procurement, contract management and production of publications. Furthermore, the Agency is seeking synergy across its activities by proposing Healthy Workplaces Campaign topics that are aligned with a preceding large-scale OSH Overview, thereby ensuring availability of high-quality content for the campaign and the best possible impact for the overview through extensive promotion of the findings. Based on its experience of working with reduced human resources, the Agency is very conscious of the need to ensure the sustainability of its programmed activities at the same time as being able to respond in a timely manner to requests for additional support from the European Commission. This was a further factor in the Agency introducing the change to the Healthy Workplaces campaign cycle which is being piloted for the 2020-2022 and confirmed for the 2023-2025 campaign.

The Agency will continue to cooperate with other Agencies – EMPL Agencies and those with other partner DGs - on projects of shared interest. This includes the use of shared services where relevant. In addition, the Agency will continue to rely on its Activity Based Management and Activity Based Budgeting systems in order to maintain a close integration of its annual work programme and budget.

The Agency will also further develop its modernisation and digitalisation effort leveraging the adoption of new systems and tools. This includes exploiting all the functionalities of the document management system ARES, further implementation of SYSPER modules for managing HR processes, using e-procurement, paperless and e-Signature, implementing MIPS for management of missions, seeking simplification of internal processes and digitalisation of workflows in the financial circuits and internal approvals.

A number of the efficiency measures will also contribute to EU-OSHA's efforts to reduce its impact on climate change. The efficiency measures are not, however, the only initiatives in this respect. More details can be found in Annex VI.

EU-OSHA will maintain a strong focus on ensuring an efficient use of its human and financial resources while achieving the highest levels of quality in the performance of its work programme. It will do this through the application of modern management tools and through effective organisational development.

II.2.5 Negative Priorities/Decrease of Existing Tasks

In order to be able to allocate the necessary resources for the growth of existing tasks related to the post-pandemic, the tasks under the Strategic Framework, and the need for strengthened communication of EU-OSHA's research work (see above under Growth of existing tasks), EU-OSHA has taken a number of measures that will apply to the programming period 2024-2026:

- 1) The cycle for the Healthy Workplaces Campaigns has been extended from two to three years meaning that the average resource needs for the campaign per year will be lower. This will allow stronger promotion of the research work. For the moment the decision on extending the campaign cycle covers the campaign ending in 2028.
- 2) EU-OSHA is a networking organisation and meetings and missions are an important part of its operational activities. It has been decided from 2022 to reduce the number of physical meetings and missions organised by EU-OSHA and instead make better use of the technological possibilities for virtual and hybrid meetings. This will, obviously, also strongly contribute to reducing the Agency's carbon footprint.
- 3) The cycle for initiating new OSH Overviews will depend on the availability of resources. A new OSH is foreseen to begin in 2024, and two more in 2025 and finally one in 2026.

Section III - Annual Work Programme 2024

Executive Summary

In 2024, EU-OSHA will further develop activities initiated in previous years in the framework of the policy context outlined in section I. Relevant policy priorities such as the impact of digitalisation on OSH, and OSH compliance by MSEs was addressed by the work delivered in 2023 from two ongoing OSH overviews and the HWC 2023-2025 on digitalisation. Work on equally policy relevant topics such as OSH in the health and social care sector and OSH and psychosocial risks is ongoing and will provide the knowledge base for the Healthy Workplaces Campaign starting in 2026. A new OSH overview activity will be initiated on Circulatory diseases which is directly mentioned in the Strategic Framework. 2024 will also see the launch and implementation of the fourth wave of ESENER coming to light as well as the outcome of the first edition of the Workers' exposure survey on cancer risk factors (WES).

Since the beginning of the Covid-19 outbreak, EU-OSHA has played a key role, alone or in cooperation with others, in providing useful information and resources to intermediaries to assess the risks and the impact on the workplaces and mitigate them. The Agency will keep on contributing to the drawing of lessons from the pandemic and identifying areas which would require further assessment in light of such lessons in order to increase preparedness for future threats to workers' health and safety.

EU-OSHA will continue collaborating closely with other agencies in 2024 – with those in the employment and social affairs policy field and beyond. On several operational activities, there is good cooperation to make the best use of the respective resources of each agency. This is for example the case for the collaboration on survey methods with Eurofound in relation to ESENER and the involvement of FRA and Eurofound survey expertise in the development of the workers' exposure survey. In addition to the bilateral cooperation, useful cooperation also takes place through the network of agencies, e.g. EU-ANSA. For the horizontal activities, a cooperation on several topics and in several ways, takes place, from shared services to information exchange. This covers almost all topics, ranging from peer risk assessment reviews, over shared procurement actions to mutual support in development of performance measures. In the area of performance management, in addition to the cooperation in the agencies' network, EU-OSHA has established close collaboration with the other agencies in the employment and social affairs policy field.

During 2023, EU-OSHA has had a strategic dialogue on the basis of this draft Single Programming Document with relevant agencies in order to coordinate actions for 2024.

Priority area 1: Anticipating Change

1.4 Anticipating future challenges to OSH – OSH implications of future climate changerelated developments and crises

The nature of work, employment relationships, types of workplaces, technologies used for work are developing rapidly, as well the workforce getting more diverse and dispersed. At the same time, major societal transitions are taken place, asking for a more anticipatory and transdisciplinary approach, caused by new volatility, uncertainty, complexity, and ambiguity (VUCA). Trends like these together will affect jobs and working conditions and so bring new challenges to OSH in the future that need to be anticipated and managed adequately to allow effective prevention.

Anticipating and managing change in the world of work brought about by the green, digital and demographic transitions is one of the three cross-cutting objectives identified in the EU OSH Strategic Framework, which, in line with previous EU OSH strategy documents, has identified risk anticipation as a core task for EU-OSHA.

In 2024, after having finalized three successful Foresight policy cycles (on green jobs, digitalisation and circular economy), a new two-year Foresight Cycle will start on 'OSH implications of future climate change-related developments and crises', after approval by the Management Board of the proposal in 2023.

Under this new foresight, the principal research question will be how the world of work is going to adjust to the possible permanent changes and disruptions that will be regularly triggered by extreme future climate events (continuous droughts and forest fire, intense rainfall, severe flooding, lack of water availability, heat waves, changes in disease vector distribution, pandemics, disabled supply chains etc¹⁹) and to the new ways of working brought as a human response to those changes (e.g. adaptation needs in the agriculture/forestry, tourism, and energy sectors) and how this impacts safety and health at work. Associated phenomena such as forced migration waves, geopolitical and economic instability is also likely to impact workplaces and OSH.

Given the uncertainty of future climate change impacts on OSH (i.e. where they might impact, on which sectors/jobs/workers 'groups, who will be affected and how severely), focussing on future disruptions (crises and structural changes) is a particularly well-suited and a useful approach to explore potential future developments and implications for the future of OSH.

The new foresight will build on the results of the previous foresight results as well as the findings and recommendations from the foresight evaluations from 2019 and 2023 (recommendations will be available during 2024). It will make use of foresight methodology, combining literature reviews, in-depth interviews/focus groups and scenario development. A feasibility/scoping study will be initiated to support EU-OSHA and its stakeholders in defining the scope and the choice of the methodology and instruments.

An important aspect of EU-OSHA's new foresight will be to elaborate on the Foresight capacity building together with its stakeholders and network (e.g. OKAG, focal points and other stakeholders). This could be in the form of continuous (co-creative) horizon-scanning as core part of its foresight activities, as well as providing tools and support for the OSH community working with it.

EU-OSHA will continue cooperating with other organisations carrying out foresight activities and future-oriented work at EU or national level implementing foresight to guide priority setting and strategic development (such as the EU-ANSA, PEROSH, Joint Research Centre (JRC), STOA, etc.).

Goal

To contribute to anticipating new and emerging risks, providing a basis for priority-setting in OSH research and policy actions and improving the timeliness and effectiveness of preventive measure within the changing context of the world of work as a result of, climate change.

28

¹⁹ see also EU-OSHA recent OSH wiki on Climate change and OSH

The foresight will also inform a new OSH Overview on climate change that will be initiated in 2025. The overview will explore the OSH impacts of the currently observed effects of the climate change, providing sound insights into the safety and health outcomes and effective preventive measures in terms of policies, strategies and workplace practices.

Operational Objectives

This activity will:

- Provide insight as to how OSH related policies and practices can be adapted to the long-term trends and new circumstances of work emerging as a consequence of the climate change;
- Stimulate high quality debate amongst selected stakeholders on the possible long-term OSH impacts of the climate change-related developments and crises

Expected results and outcomes

Better informed policy-makers and researchers on the consequences for OSH of future climate change developments and uptake of the Agency's work on OSH-relevant policy, practice and research.

Indicators	Latest result (2022) ²⁰	Target (2024)	Means	Frequency
Usefulness	72%	80%	Surveys	Annually
Impact	77%	70%	Surveys	Annually
EU added value	76%	80%	Surveys	Annually
Relevance	69%	80%	Surveys	Annually

Main outputs and actions

Under this activity, expert knowledge on future climate change development and their impact on OSH will be developed and presented via different publications such as reports and expert articles and disseminated via events (workshops etc.).

Priority area 2: Facts and figures

2.1 ESENER

The European Survey of Enterprises on New and Emerging Risks (ESENER) is a representative establishment survey looking at how safety and health risks are managed in European workplaces. With this activity, EU-OSHA intends to contribute to improving statistical data and developing the necessary information for evidence-based policy-making, as highlighted by the EU OSH Strategic Framework 2021-2027.

Since the first edition in 2009, ESENER has played a key role in helping EU-OSHA to provide cross-nationally comparable information that can contribute to OSH policy-making. In 2022, 78% of the respondents of 2022 EU-OSHA's stakeholders' survey regarded ESENER as a valuable source for policy making at the European level (76% at the national level) and 45% considered that providing comparable data is its most valuable contribution to better occupational safety and health in Europe. 78% of respondents equally agreed or strongly agreed that ESENER data adds value to the information provided by other organisations or institutes and a majority (68%) indicated that they were satisfied or very satisfied with the way EU-OSHA exploits ESENER data to produce follow-up studies.

ESENER provides information on general OSH risk factors and how they are managed; psychosocial risks such as stress, bullying and harassment; drivers of and barriers to action in OSH management and

²⁰ EU-OSHA Stakeholders' survey 2022 and other surveys with users and stakeholders carried out in 2021 – results refer to the last foresight activity on OSH in the Circular economy.

describes worker participation in OSH. By including psychosocial risks the survey sheds light on under-explored and increasingly important areas of OSH and which are a growing concern for European workplaces. Digitalisation and its impact on OSH was included as a new topic in ESENER-3 (2019). In the development of all three editions of the survey to date, EU-OSHA has collaborated fruitfully with Eurofound on the design of international telephone surveys at enterprise level. In addition to bilateral cooperation, further cooperation is fostered via the participation of several EU agencies (such as EU-OSHA, Eurofound, Cedefop and FRA, among others) in the EU-ANSA cluster on surveys.

Following completion of fieldwork of ESENER-3 in 2019, a series of in-depth analyses were launched, with a clear focus on sectoral studies following the recommendation from the ESENER-2 ex-post evaluation. In order to account for the impact of Covid-19, all follow-up studies have complemented the analysis of the ESENER datasets with qualitative research, namely interviews with key stakeholders and sectoral experts and social partners. All studies were completed in 2023, including the ex-post evaluation of ESENER-3, whose recommendations have informed the development of ESENER-4. The methodological approach of the survey will remain the same to ensure comparability across waves but there will be an in-depth review of the questionnaire to ensure its relevance, particularly on topics such as digitalisation and the impact of COVID-19 on the management of OSH. Fieldwork for ESENER-4 is scheduled for summer and early autumn 2024, meaning that first results are expected to become available by early 2025.

Goal

To contribute to the formulation of evidence-based policies by providing high quality information on OSH (participation of workers, the practical management of OSH and the management of psychosocial risks) and comparable data across Europe.

Operational Objectives

This activity will:

- Describe more accurately the comparative situation across Europe regarding preventive
 measures, workers' exposure to OSH risks. Present a way of tracking changes over time.
 Provide analytical information on workplace management of OSH, particularly on psychosocial
 risks and digitalization as well as on the participation of workers in OSH. Find possible ways of
 addressing causes of accidents and ill-health.
- Combine the quantitative data from ESENER with qualitative data and quantitative data from other surveys to increase the insight and understanding of key issues related to workplace management of OSH in practice.

Expected results and outcomes

ESENER has grown as a key data source for policy-makers and researchers at national and EU level on how enterprises manage OSH and is seen as an effective monitoring tool to track changes over time, making an important contribution to the EU OSH Information System. ESENER data and publications will periodically feed relevant EU policy documents.

Indicators	Latest result (2022) ²¹	Target (2024)	Means	Frequency
Relevance to needs	89%	80%	Surveys	Annually
Usefulness	82%	80%	Surveys	Annually
Impact	82%	70%	Surveys	Annually
EU added value	87%	80%	Surveys	Annually

-

 $^{^{21}}$ EU-OSHA Stakeholders' survey 2022 and other surveys with users and stakeholders carried out in 2021 – results refer to ESENER-2

Indicators	Latest result (2022) ²¹	Target (2024)	Means	Frequency
Relevance to needs: Number of countries that boosted samples sizes with own resources	2	2 countries per survey wave	Monitoring reports	Other
Usefulness: Number of downloads of ESENER data	46%	10% increase from previous wave	Monitoring reports	Other

Main outputs and actions

In the framework of this activity, the Agency has produced the overview reports on the secondary analysis of the data from the survey's third wave on specific topics. Targeted communication and promotion actions at national and European level will help ensure impact. As pointed out above, the evaluation of the third survey has been concluded and has informed the preparation of the fourth wave. The fieldwork will be finalised by end 2024 and the dataset form the fourth wave will be available in late 2024 or early 2025.

2.8 Workers' exposure survey on cancer risk factors

The workers' exposure survey on cancer risk factors draws on the conclusions of the feasibility study from 2017 and the input from experts and builds on the experience of the Australian Work Exposures Study (AWES). The activity sets out to fill an important information gap that has been widely identified. in the context of the revision of the Carcinogens, Mutagens or Reprotoxic substances Directive (CMRD) but also in the January 2017 European Commission Communication on modernisation of EU OSH legislation and policy. With this activity, EU-OSHA aims to meet the challenge of improving statistical data collection and developing the necessary information that aims to support evidence-based policymaking. The survey also seeks to provide information that could contribute to the work of the ACSH Working Party on Chemicals, where appropriate, and to improve the protection against dangerous substances and fight occupational cancer, in particular as regards the preparation of possible future amendment proposals of the CMRD and on the revision of the directive "Asbestos at work". In addition, this activity is expected to contribute to the OSH actions of Europe's Beating Cancer Plan and to support one of the key objectives of the EU strategic framework on health and safety at work 2021-2027 on improving prevention of work-related diseases, in particular cancer. EU-OSHA is liaising especially with the Directorate-General for Health and Food Safety (DG Health) and Joint Research Centre and started discussing the possible dissemination of WES results via the European Cancer Inequalities Registry. The survey provides a reliable assessment of exposure related to jobs and tasks that complements existing sources of data on workplace carcinogens exposure, national surveys and information available from national administrative sources. This activity focusing on occupational exposure to cancer risk factors will complement other EU actions such as Restrictions and Authorisations under REACH, or setting occupational exposure limits (OELs) under CMRD.

With the fieldwork having been carried out in 2023 in six countries (Germany, Ireland, Spain, France, Hungary and Finland), EU-OSHA will continue the in-depth analyses of the survey in 2024. EU-OSHA will foster take-up of the findings by those involved in the regulation of substances covered by WES, among others the European Chemicals Agency (ECHA), the European Parliament, the European Commission, including ACSH, etc.

In relation to the amended directive "Asbestos at work", EU-OSHA will generate useful data on occupational exposure to asbestos, such as demographics and job-related information for the workers exposed to asbestos, as well as the main circumstances of the occupational exposure to asbestos. This data is expected to support the European Commission in the forthcoming update of the Commission recommendation concerning the "European schedule of occupational diseases" as regards asbestos' exposure-related occupational diseases.

International expert and advisory groups advise EU-OSHA on the project implementation and provide feedback on the survey. The advisory group (WESAG) provides strategic input and includes appointed

members representing the three interest groups of the Management Board and the European Commission since 2020. The international expert group provides technical input and consists of researchers in the field of exposure to cancer risk factors, epidemiologists, OSH experts, occupational hygienists and worker survey experts from other agencies (Eurofound and FRA).

Goal

To contribute to the reduction of work-related cancer by providing data and information aimed at improving the understanding among policy-makers, researchers and intermediaries about workers' exposure to cancer risk factors for them to be able to prioritise and target appropriate actions.

Operational Objectives

This activity will:

- Encourage more and better-targeted policy on exposure to cancer risk factors by providing upto-date, cross-national, reliable and relevant information on workers' exposure to cancer risk factors in Europe.
- Contribute to improving the prevention of exposure to cancer risk factors in European workplaces by raising awareness of the prevalence of workers' exposure to them.
- Contribute to monitoring tools of OSH (such as EU-OSH info system).
- Stimulate and support follow-up initiatives by giving public access to the database and by providing a basis for future possible improvements and expansion of the survey methodology for other substances/types of risks.

Expected results and outcomes

The WES will have become an important data source for policy-makers and researchers at national and EU level on workers' exposure to cancer risk factors resulting in timely and appropriate actions aimed at reducing work-related cancer. A comprehensive evaluation of the first WES will be carried to assess the results and decide on the future of the WES,

Indicators	Latest result	Target (2024)	Means	Frequency
Relevance to needs	N/A	80%	Surveys	Annually
Usefulness	N/A	80%	Surveys	Annually
Impact	N/A	70%	Surveys	Annually
Usefulness: Number of downloads of WES data	N/A	10% increase from previous wave	Monitoring reports	Other

Main outputs and actions

The main output from this activity is a dataset with policy-relevant data on workers' exposure to cancer risk factors in Europe. On that basis, reports with secondary analysis will be developed in the following years and infographics and factsheets will be published to help users navigate through the data.

2.9 EU OSH Information System

With this activity, EU-OSHA intends to provide an up-to-date and comprehensive overview on basic data of important indicators that describes the OSH situation in Europe. In particular, this activity addresses the need for a comprehensive evidence base, being this a pre-condition for the prevention of work-related diseases and accidents, as highlighted in the EU OSH Strategic Framework 2021-2027. By developing a reliable and stable information system on OSH in Europe, based on data from the relevant national and European data providers, this activity is expected to provide a valuable input to support policy-making and research via a stable monitoring tool and periodic reports. This is done through a dashboard, the OSH Barometer, which provides an up-to-date and comprehensive overview of basic data on important indicators that describe the OSH situation in Europe. With the information developed within this activity, the Agency is also in a good position to provide support to the European Commission.

In 2023, based on the indicator data and the further analysis, EU-OSHA published the first issue of the report "Occupational Safety and Health in Europe – state and trends 2023". Further editions of this report will be produced at regular intervals so that developments over time or trends can be presented in a way that supports the policy cycle; in particular the drafting of national and EU strategic documents on OSH.

Following the launch in 2020 of the EU OSH Information System, which was developed in collaboration with EU-OSHA and DG EMPL, this activity will add progressively to the collection of indicators and improve their presentation online through is data visualisation, the OSH Barometer. The Agency will continue to work closely with the Commission (especially consulting Eurostat on the identified data needs), its network of National Contact Points and with the corresponding ACSH Working Party to consolidate the indicators and develop consensus on new indicators over time. Such indicators include among others a number of Forecasts relevant to occupations, sectors, and employment, based on Cedefop's Skills Forecast that covers the period up to 2035. The Agency started to work closely with Cedefop on these since they could identify future trends and areas of concerns, while new data will be updated on a regular basis. This information along with the inclusion of specific indicators could allow effective targeting of sectors and identification of training needs. Also, the enforcement section is planned to be strengthened, by adding a number of additional indicators providing information on the Labour Inspectorates' capacity and activities. These data will be provided by publicly available data as provided by SLIC and National Labour Inspectorates. Finally, the Social Dialogue section will be improved, through the addition of a composite indicator supported by the corresponding methodology. This indicator will be calculated based mostly on currently available Eurostat data.

Furthermore, EU-OSHA will contribute to the work of the Global Coalition on OSH launched at the 2017 World Congress in the development and dissemination of indicators, particularly in support of the Commission as leader of the Task Group for the Construction of a Multiregional OSH Information System. The fact that in 2023 there were more than 16.000 distinct visitors from 156 distinct countries accessing the OSH Barometer, provides evidence that it becomes a point of reference for OSH at a global level.

Goal

To contribute to improved evidence-based policy-making and research in the area of work-related diseases prevention by providing high quality, comparable and timely data on relevant OSH indicators.

Operational Objectives

This activity will:

- Further define and develop the EU-OSH info system, in particular with regard to data collection and visualisation.
- Provide high quality data by engaging and collaborating with key data providers and stakeholders.
- Establish a stable collaboration with the National Contact Points and EU-Institutions and committees to organise a stable, reliable and continuous data transfer.
- Provide comprehensive trend analysis to support EU and national policy cycle.

Expected results and outcomes

The OSH Barometer dashboard and the State of OSH in the EU reports will have become an authoritative source of information that will support policy-making and research. The analysis of the data from the OSH Barometer will regular feed relevant EU policy documents.

Indicators	Latest result (2022) ²²	Target (2024)	Means	Frequency
Relevance to needs	N/A	80%	Surveys	Annually

²² EU-OSHA Stakeholders' survey 2022

-

Indicators	Latest result (2022) ²²	Target (2024)	Means	Frequency
Usefulness	71%	80%	Surveys	Annually
Impact	73%	70%	Surveys	Annually
EU added value	N/A	80%	Surveys	Annually

Main outputs and actions

With this activity, the Agency will further develop and refine the EU OSH information system with the inclusion of new indicators, organise expert meetings and produce regular analytical report with qualitative analysis of the data from the indicators. With the data and analysis developed under the activity, EU-OSHA will keep on contributing to support policy debate, research and policy making.

2.11 Supporting Compliance

Improving the extent and quality of compliance with OSH regulations and of preventive action in general is a longstanding objective at European and national level. Most recently, the Strategic Framework, which aims to improve the application and enforcement of EU law by, for example, supporting the work of labour inspectors and developing tools and guidance for employers. Further, the Strategic Framework promotes a Vision Zero approach to OSH, which refers, among other areas, to good practice exchange between national labour inspections and the focus on high-risk sectors, such as agri-food and construction. However, meeting this objective is an increasing challenge given the rapidly evolving world of work, especially as regards changes in society and markets, new forms of employment, business models and the nature of work.

Research such as EU-OSHA's OSH overview on micro and small enterprises has pointed to the importance not only of factors internal to the enterprise (management commitment, worker participation, etc.), but also to those that are external to it. The context in which an enterprise operates exerts a strong influence on whether, and if so to what extent, it complies with OSH regulations and takes effective and efficient prevention measures. These external factors include enforcement, supply chains, prevention services, societal norms and expectations, availability of financial support, social dialogue, etc.

This activity aims to provide an insight on the environment or 'context' that incentivises and assists enterprises – including small and micro – to fulfil their obligations under OSH regulations. In so doing, it addresses one of the three main challenges identified in the EC Communication on modernisation of the EU OSH legislation and policy. The five themes identified as part of this OSH overview are: (1) innovation in enforcement, (2) prevention services, (3) social reporting, (4) supply chains and (5) business incentives.

As a result of the diversity of national contexts and approaches on the one hand and the increasing availability of data and tools to analyse it on the other, many interesting initiatives have been developed. The identification and analysis of such initiatives with the aim of sharing knowledge and stimulating further action is a key function of the Agency. Furthermore, the selected topics align with current EU policy on OSH and respond to interest expressed by the Agency's stakeholders and follow up to the Commission's ex-post evaluation of the OSH acquis.

The Covid-19 pandemic has forced businesses to reconsider their priorities related to OSH risk assessment in an abrupt and unprecedented way. The way the risks of occupational exposure of workers to the risk of transmission of COVID- 19 and how this is affected by contextual influences, such as national and global supply chains, is included in this activity. The scale of the pandemic has been unprecedented and measures to support compliance with best practice to reduce risks therefore merit special attention. This is also in line with the objective of increasing preparedness for future pandemics and emergency situations, as state in the current EU OSH Strategic Framework.

Based on the findings of the overarching review published in 2021, EU-OSHA is pursuing two strands of research with in-depth projects, i.e. on market influence and on state influence. The LIFT-OSH project (Leverage Instruments for OSH) focuses on the market influence of supply chain on OSH in the

construction and agri-food sector. The third expert meeting was held on 10 October 2023 as a hybrid meeting in Bilbao. The feedback from the experts helped to promote the final outputs of the project and thus increase its usefulness for the stakeholders. In July 2023 the Agency published first outputs, a literature review, summary and two policy briefs. The expert article on 'Enhancing Measuring and Monitoring Approaches of Sustainability and OSH within Supply Chains' will be published early 2024.

In 2022-23, the activity began with state influences and analyses the role of innovative inspection and enforcement practices and the role of preventive services in supporting compliance. In 2022 the procurement of the larger in-depth national case study reports has been started with Norway and Germany, and in 2023 it has been extended to Poland, Portugal and Ireland. Further comparative analysis will be initiated in 2024. In addition several expert articles are under way or already published, such as on Well-being at work in the service voucher sector in Belgium, on the effectiveness of different systems of sanctions in labour inspectorates or on occupational safety and health professionals who provide preventive services in Europe.

Goal

To contribute to formulating polices aiming at creating an environment or 'context' that incentivizes and assists enterprises – including small and micro – to fulfil their obligations under OSH regulations.

Operational Objectives

This activity will:

- Identify innovative approaches taken by enforcement authorities (i.e. labour inspectorates) to increase compliance with OSH legislation with the aim of spreading good practice.
- Analyse the use of prevention services with the aim of identifying circumstances or factors that result in an optimal use of such services in improving OSH in enterprises.
- Assess the effectiveness of social reporting initiatives in fostering better OSH performance by enterprises with the aim of raising awareness about success factors and maximising the influence of such initiatives.
- Investigate the impact of supply chain, including at global level, with the aim of harnessing the positive effects and avoiding or minimising negative effects.
- Review the use of business incentives with the aim of raising awareness about success factors, helping to avoid pitfalls and maximising their impact.

Expected results and outcomes

Policy makers will become acquainted and take into account the information, data and good practices made available via this activity for the formulation of relevant policies and initiatives related to supporting enterprises in complying with their OSH obligations.

Indicators	Latest result	Target (2024)	Means	Frequency
Usefulness	N/A	80%	Surveys	Annually
Relevance to needs	N/A	80%	Surveys	Annually
Impact	N/A	70%	Surveys	Annually
EU added value	N/A	80%	Surveys	Annually

Main outputs and actions

The activity will produce publications based on research and analysis of the success factors for enterprises' compliance with OSH legislation.

2.12 Psychosocial risks

The need to address work-related psychosocial risks and protect mental health at work has been highlighted in the key EU and national policies and strategies. The previous EU Strategic Framework

on Health and Safety at Work, the Communication of the European Commission on the Modernisation of EU OSH legislation from 2017, the European Pillar of Social Rights in 2018 and finally the new EU Strategic Framework 2021-2027 acknowledge the need to protect workers' mental health by addressing the impacts of changes in work organisation and increasing workforce diversity. They highlight the need to identify and disseminate good practice on preventing mental health problems at work and raise awareness. Additionally, the Council has passed a decision authorising Member States to ratify, in the interest of the EU, the Violence and Harassment (in the world of work) Convention, 2019 (No. 190) of the International Labour Organization. In the framework of this OSH overview EU-OSHA will also contribute to the implementation of the Commission's action on a 'Comprehensive approach to mental health' (Commission Work Programme 2023).

The importance of the issue has also been acknowledged at national level, with several countries implementing changes in the legislation highlighting more prominently the need to identify and prevent psychosocial risks as part of OSH management in the workplace.

The activity builds on the Agency's previous projects related to psychosocial risks and complements current activities that include psychosocial issues (such as ESENER and Digitalisation). It will also take into account activities carried out by other EU Institutions and Agencies, the ILO, the WHO and the wider research community and will seek cooperation where appropriate, including with Horizon Europe research projects on mental health at work. The activity aims to contribute to this challenging issue by providing a comprehensive picture of the current challenges related to psychosocial risks and mental health at work in the EU countries and an overview of new research and good practices in terms of policies and workplace interventions. It aims at generating new knowledge and improve understanding of how workers' mental health can be protected, and indeed boosted, through effective psychosocial risk management in the modern workplace including in micro and small enterprises. It will also take due account of emerging risks in specific sectors, such as healthcare and cross-cutting areas, such the changes in the world of work brought about by digitalisation and as a result of the COVID-19 pandemic.

Following small-scale research in 2022 and based on the results of the OSH pulse, the main research projects started in 2023 and will continue during 2024.

Research reports commissioned in 2023 on work-related psychosocial risks in the agricultural sector and working with mental health conditions are specifically mentioned as contributions to the action in the Commission's communication on a 'Comprehensive approach to mental health'.

This activity will provide the knowledge base for the Healthy Workplaces Campaign 2026-2028 on mental health and psychosocial risks at work in 'new and overlooked occupational groups, sectors and areas' and will to that end it will inform new projects in 2024 and 2025.

Goal

To contribute to improved knowledge of psychosocial risks at the workplace and their prevention amongst policy makers and researchers by providing a comprehensive picture of the phenomenon; and amongst intermediaries working with a close connection to workplaces, in terms of providing methods of identifying psychosocial risks and implementing effective preventive measures.

Operational Objectives

This activity will:

- Carry out in-depth comparative research on the overall situation related to psychosocial risks
 and workers' mental health in European workplaces, taking into consideration national
 differences, sectoral and company size specificities, gender, age and vulnerable groups. It will
 explore new research and statistics, investigating the effectiveness of EU and national policies,
 strategies, approaches to prevention and workplace practices.
- Identify the main challenges and needs of workplaces including micro and small enterprises in terms of prevention and management of psychosocial risks and identify best practices in
 terms of policies, strategies and workplace interventions.
- Provide evidence-based support for policy recommendations and knowledge supporting effective psychosocial risk management in workplaces of different sizes and sectors.

Expected results and outcomes

Policy makers and researchers will have become acquainted and taken account of the information, data and good practices made available via this activity for the formulation of relevant policies and initiatives related to the assessment and management of psychosocial risks in the workplace. This includes a better understanding of the potential impact of different policies, such as regulation and enforcement, sectoral and social partner agreements, etc. and the key success factors.

In addition, outputs should support making workplaces and intermediaries working with a close connection to workplaces becoming more aware of the nature and impact of psychosocial risks in the workplace and more able to identify them and implement effective preventive measures.

Indicators	Latest result	Target (2024)	Means	Frequency
Usefulness	N/A	80%	Surveys	Annually
Relevance to needs	N/A	80%	Surveys	Annually
Impact	N/A	70%	Surveys	Annually
EU added value	N/A	80%	Surveys	Annually

Main outputs and actions

Under this activity, the Agency will produce overview reports and guidance/best practice documents, which will be delivered to the target audiences via tailored engagement, communication and promotion activities.

2.13 OSH and Health and social care sector

The European health and social care sector has a critical role in contributing to the overall health and well-being of the workforce and society as a whole. Better protection for workers in the health and social care sector is identified as a priority in the Strategic Framework, which specifically calls on the Agency to produce this OSH Overview. The human health and social work activities sector is one of the largest in Europe, employing around 11% of workers in the European Union – 27 countries (from 2020), with women accounting for 79% of the workforce. A significant proportion of healthcare workers are employed in hospitals; however, they can also be found in other workplaces, including nursing and care homes, medical practices and in other health-related activity areas. In addition, the significance of the human health and social work activities sector is likely to grow in the context of demographic change. Furthermore, the COVID-19 pandemic has highlighted how some sectors, occupations and groups of workers, such as healthcare staff and care workers, are crucial for the functioning of the whole society and deserve particular attention. They are in charge of protecting citizens' health and it is essential to ensure that they are adequately protected themselves, also as regards their mental health and wellbeing.

In the framework of this OSH overview EU-OSHA will also follow and contribute to implement the European Care Strategy. "The European Care Strategy calls for better working conditions and wages in the care sector, including by improving the occupational health and safety of care workers. The care strategy announced a review on the application of EU standards governing working conditions in the long-term care sector, which will build among other things on the forthcoming analysis on occupational safety and health for the health and social care sector"

With this activity, the Agency aims at providing a sound, evidence-based and comprehensive picture of the current challenges related to the healthcare sector in Europe, exploring new research and statistics, investigating the effectiveness of the EU and national policies, strategies, approaches to prevention and workplace practices. It will look to identify the main challenges and needs of workplaces, taking into account the diversity of health-related activities (such as in hospitals and residential care facilities). At a more strategic level, the Agency intends to address the call for an OSH Overview on the topic set out in the EU Strategic Framework on Health and Safety at Work 2021-2027, by improving the prevention of work-related diseases in the sector; contributing to address the issues related to an ageing workforce in

the sector; collecting reliable, timely and comparable statistical data; promoting the identification and exchange of good practices on ways to improve OSH conditions for healthcare workers.

The improvement of working conditions in the sector and the wellbeing of health and care workers will also contribute to reach other goals set by other EU policies areas: improving the quality of health and care services provided in the EU and ensuring the right functioning of a sector (services) that is essential for the whole society (in normal times and especially in times of crisis (economic, sanitary /pandemic).

The main research work was based on the scoping work carried out in 2022. The scoping phase was built on stakeholders and experts consultation and collection of key data and a review of the state of the art of the research. As a result of this scoping exercise ten research areas were identified:

- Provide a better overview of OSH in the sector at EU level by exploiting main EU OSH related surveys
- Impact of the COVID-19 pandemic on the sector
- Impact of digitalisation on the health and safety of health and social care workers
- Musculoskeletal health Improving knowledge, increasing awareness and providing Good Practice Information
- Mental health Improving knowledge, increasing awareness and providing Good Practice Information
- OSH in the home care sector (providing care services at home)
- Exposure / protection to hazardous medical products
- OSH in the Long Term Care sector
- Specific groups of workers in the human health sector: health care assistants (auxiliaries)
- Interaction between OSH, patient safety / quality of care and healthcare systems

For the first three areas, deliverables are expected to be published during 2024, whereas for the four following areas (on musculoskeletal health, mental health, home care and on exposure to cancer risk factors / hazardous chemical products), work will be started during the first half of 2024.

Goal

To contribute to the prevention of OSH-related problems and the promotion of a good physical and mental health at work among the workers of the health and social care sector by providing policy-makers, social partners, with better understanding and a comprehensive, cross-national insight on state of the healthcare sector when it comes to OSH.

Operational Objectives

This activity will:

- Carry out in-depth comparative research on the overall situation related to OSH in the health
 and social care sector with a special focus on the prevention and management of the main risks
 and the promotion of a good musculoskeletal and mental health in European workplaces, taking
 into consideration national differences, gender, age and vulnerable groups' perspective.
- Identify best practices in terms of policies, strategies and workplace interventions.
- Provide evidence-based support for policy recommendations and knowledge supporting effective OSH management in workplaces of different sizes and activities (nursing and care homes, hospitals and other health-related activities).

Expected results and outcomes

Policy makers and researchers will have become acquainted and taken account of the information, data and good practices made available via this activity for the formulation of relevant policies and initiatives related to the assessment and management of risks in the healthcare sector and better priority setting overall.

OSH intermediaries will have gained evidence-based support and practical solutions in terms of:

OSH prevention / management in the health and social care sector in general

- Prevention of the main existing risks in the sector (taking also into account that they act in combination)
- Practical tools / information intended to the workplace
- Good practice examples, case-studies (that can be transposed from one specific health-related activity to another one or from one country to another one)

Indicators	Latest result	Target (2024)	Means	Frequency
Usefulness	N/A	80%	Surveys	Annually
Relevance to needs	N/A	80%	Surveys	Annually
Impact	N/A	70%	Surveys	Annually
EU added value	N/A	80%	Surveys	Annually

Main outputs and actions

Under this activity, the Agency will produce overview reports and guidance/best practice documents which will be delivered to the target audiences via tailored engagement, communication and promotion activities. The outputs - related to the research areas were defined as a result of the scoping phase during 2022.

2.14 OSH Overview – Circulatory Diseases

Circulatory diseases are a group of disorders of the heart and blood vessels and may include coronary heart disease, cerebrovascular disease, peripheral arterial disease, thrombosis, etc. They have been identified as the second largest cause of work related deaths in the EU and the leading cause of death in the EU (over 1.8 million cardiovascular disease related deaths in the EU in 2017).

There is considerable evidence/research that supports the causative relationship between socioeconomic factors (social class, social status, etc.) and/or behavioural factors (tobacco use, unhealthy diet and obesity, physical inactivity and harmful use of alcohol) with cardiovascular disease.

The link to work related factors has also been shown however, further research and data collection is needed on the risks related to working conditions (shift work, long working hours, job insecurity, stress, exposure to air pollutants, noise, etc.) and their association with circulatory diseases and possible prevention measures, also in relation to the new forms of work. The European Commission has highlighted the growing relevance of this topic in the EU Strategic framework on health and safety at work 2021-2027.

The activity will contribute to the policy objectives included in The European Pillar of Social Rights, Chapter II 'Fair working conditions' that calls for 'Work-life balance' (principle 9) and 'Healthy, safe and well-adapted work environment.

Further, the European Commission is working on the new initiative "Healthier Together – EU Non-communicable diseases" which aims to support EU countries to reduce the burden of non-communicable diseases including circulatory diseases. Although the initiative covers a much wider perspective, it may be possible to find synergies and ways of collaborating.

Prevention of circulatory diseases is also high on the agenda within the field of cardiology and September 2021 saw the launch of the European Alliance for Cardiovascular Health. The aim of this initiative is to raise awareness of the burden of circulatory disease and call on EU policymakers to develop a comprehensive EU Cardiovascular Disease Plan to address the increasing burden of circulatory disease.

The activity will aim to provide a sound, evidence-based and comprehensive picture of the current challenges related to occupational circulatory diseases in the EU countries, exploring new research and statistics, investigating the effectiveness of the EU and national policies, strategies, approaches to prevention and workplace practices. It will look to identify the main challenges and needs of workplaces - including micro and small enterprises.

The activity will meet the needs of policy-makers providing support with designing better policies, strategies and more accurate priority setting at EU and national level. It will also provide researchers with new knowledge contributing to further research developments in the field.

In 2024, the scoping phase will start.

Goal

To contribute to prevent occupational risks related to circulatory diseases and to improve workers' overall wellbeing and effectiveness. In order to do so, it will provide policy-makers, social partners and OSH practitioners at the workplace with a better understanding and a comprehensive, cross-national insight on the underlying causes of occupational circulatory diseases, identifying the best methods of recognising, assessing and preventing the risks, including policies, strategies and workplace practices.

Operational Objectives

The activity will:

- Carry out in-depth comparative research on the overall situation related to circulatory diseases in European workplaces, taking into consideration national differences, sectoral and company size specificities, gender, age and vulnerable groups' perspective.
- Identify best practices in terms of policies, strategies and workplace interventions.
- Provide evidence-based support for policy recommendations and knowledge supporting effective OSH management in workplaces of different sizes and sectors.
- Ensure optimal impact for the results through targeted engagement, communication and promotion activities.

Expected results and outcomes

Policy makers and researchers will have become acquainted and taken account of the information, data and good practices made available via this activity for the formulation of relevant policies and initiatives related to the assessment and management of occupational circulatory diseases and better priority setting overall.

OSH intermediaries will have gained evidence-based support and practical solutions in terms of:

- · OSH prevention / management of occupational circulatory diseases
- Prevention of the main existing occupational risks related to circulatory diseases (taking also into account that they act in combination)
- Practical tools / information intended to the workplace
- · Good practice examples, case-studies, etc. taking advantage of the diversity of approaches in the member states.

Indicators	Latest result	Target (2024)	Means	Frequency
Usefulness	N/A	80%	Surveys	Annually
Relevance to needs	N/A	80%	Surveys	Annually
Impact	N/A	70%	Surveys	Annually
EU added value	N/A	80%	Surveys	Annually

Main outputs and actions

Under this activity, the Agency will produce overview reports and guidance/best practice documents which will be delivered to the target audiences via tailored engagement, communication and promotion activities. The outputs - related to the research areas will be defined as a result of the scoping phase during 2024.

Priority area 3: Tools for OSH management

3.1 OiRA

Digital tools are mentioned in the EU OSH Strategic Framework under all three key objectives (change, prevention and preparedness). In addition, OiRA is specifically mentioned under the preventive approach. Accordingly, the OiRA activity plays an important role in delivering on the framework. EU-OSHA will continue to adapt, improve and maintain the OiRA software; promote the development of OiRA tools among intermediaries stressing the importance of tripartism; and provide capacity building training and support to stakeholders.

Recognising the importance of facilitating exchange of knowledge in this rapidly evolving area, EU-OSHA will keep on encouraging collaboration between the OiRA partners through the 'OiRA community' as well as among institutions promoting similar tools through the 'Interactive Risk Assessment tools' (IRAT) network through various online meetings during the year. In addition, a face-to-face OiRA community meeting is foreseen to take place in Bilbao in spring 2024.

Supporting good information provision regarding different national approaches, the Agency will continue to develop case studies, on national approaches or focussing on certain areas, such as OiRA in VET etc. To give a good overview on OiRA in strategies and legislations, an update of the respective OSHwiki article is foreseen to be done in 2024, including information on new/updated strategies and other legislative approaches related to online tools.

In 2024, the results of the second round of qualitative OiRA research implemented in several OiRA partner countries are expected. They will be adding to insights into promotion and how to best reach users. In addition the results will add information about the usability of the software and aspects that the user appreciate or do see as barriers.

The EU tool development scheme will continue. Priority will be given to EU Social Sectoral Dialogue partners requests for EU tool developments. However, EU tools for certain activities or risks will also be considered if there is no interest from the Sectoral Social Dialogue Committees. Already since 2022, the Agency has been working on two more tools covering teleworking and third-party violence, which are both published.

OiRA software itself plays a crucial role to enable good promotion. A reliable functionality that suits enduser requirements and supports the OiRA partners in their approach to promoting their tools is key. Based on this principle increased efforts will be invested in maintaining the software up to date and developing features that will help partners to better reach end-users. Results from the last OiRA community meeting suggest more investments into making the backend of the software easier to handle for updating purposes.

National tool development support in terms of financial resources is only foreseen to be given to new partners from 2023 onwards. On the one hand, most established partners have found ways to secure national funds for OiRA tool development and the requests for support were continuously going down over the last years. On the other hand, investing in general aspects like software improvements and research related to OiRA benefits all partners to the same extent. At the same time the possibility of automated tool translation facilitates tool development for all partners by taking advantage of existing tools.

Goal

To contribute to the challenge of improving OSH compliance in enterprises by increasing the number of enterprises carrying out their own, good quality and up-to-date risk assessment via online tools.

Operational Objectives

Under this activity EU-OSHA will:

- Work with intermediaries to provide free of charge, easy-to-use, state-of-art OiRA tools adapted
 to the sectors in which the enterprises operate, in order to increase the number of (especially
 micro and small) enterprises carrying out their own, risk assessment.
- Maintain and continuously improve the OiRA platform, facilitate development of more risk

assessment tools at national and EU levels, encourage EU and national (sectorial) social partners and other organisations to develop and share their national or pan-European sectorial OiRA tools, and put in place a (national) overall strategy to encourage companies to use the tools developed.

Expected results and outcomes

National strategies regarding the use of OiRA will have been encouraged. Intermediaries will have developed tools based on OiRA, adapted to national and sectoral situations and exchanged OiRA tools and related promotional activities.

Increased awareness of OSH risks amongst micro and small enterprises; increased resources dedicated to on-line risk assessment; increased number of micro and small enterprises carrying out their own risk assessment.

Indicators	Latest results (2022 ²³)	Target (2024)	Means	Frequency
Relevance to needs	81%	80%	Surveys	Annually
Usefulness	80%	80%	Surveys	Annually
Impact: Number of new risk assessments performed	72067	60.000 ²⁴	Monitoring reports	Annually
EU added value	80%	80%	Surveys	Annually
Usefulness: Number of new tools created per year (depending on Member States resources)	49	20-25	Monitoring reports	Annually

Main outputs and actions

EU-OSHA, together with the OiRA partners, will keep on publishing and updating OiRA tools. Community and networking actions will be carried out, focussing on a combination of online and face-to-face meetings. Promotional support will be ongoing via the revised website, continuous news items and the activities covered via FAST. In addition, national promotion follow-up will be supported by encouraging partners to closely follow up on the OiRA statistics via the new statistical tool included in OiRA (metabase) - always making sure that data protection is respected accurately.

_

²³ EU-OSHA Stakeholders' survey 2022 and other surveys with users and stakeholders carried out in 2021

²⁴ Doubled since 2023 (30.000)

Priority area 4: Raising awareness and communication

4.9 HWC 2023-2025 Safe and healthy work in the digital age

The Healthy Workplaces Campaign 2023-25 'Safe and healthy work in the digital age' was officially launched on 25 October 2023 at a high-level press conference with Nicolas Schmit, European Commissioner for Jobs and Social Rights and State Secretary Joaquin Pérez Rey, representing the Spanish EU Council Presidency. The campaign, together with the OSH Overview on digitalisation, provides an important contribution to the EU policy priority on digital transformation, just transition and the realisation of the Next Generation EU package as well as the European Year of Skills.²⁵

It draws on and helps promote the findings of the OSH Overview on Digitalisation finalised in 2023, thereby providing a knowledge base on the topic, including information on the existing legal and policy framework, good practice solutions, tools and instruments and successful communication and awareness raising actions in this field. At the same time, the campaign aims to raise awareness among the identified target groups by carrying out promotion and engagement actions over the campaign period.

As in previous healthy workplaces campaigns, actions focus on providing state of the art information, networking and good practice exchange opportunities. The 2023-2025 HWC builds on the experiences from the previous campaigns and the lessons learnt through evaluations.

The Campaign will address five priority areas: remote and hybrid work; smart digital systems; digital platform work; automation of tasks and; worker management through artificial intelligence.

Goal

To contribute to effective OSH prevention in the digital world of work.

Operational Objectives

The campaign will:

- Raise awareness about the importance, relevance and implications for OSH of the digital transformation of work, including the business case by providing facts and figures.
- Increase target audience awareness and practical knowledge across all sectors, types of workplaces (including virtual and remote workplaces) and specific groups of workers (e.g. women, migrants, disabled) about a safe and productive use of digital technologies at work.
- Improve knowledge about new and emerging risks and opportunities related to the digital transformation of work.
- Promote risk assessment and a healthy and safe proactive management of the digital transformation of work by providing access to relevant resources: e.g. good practice, checklists, tools, and guidance.
- Bring stakeholders together to facilitate the exchange of information, knowledge and good practice and stimulate collaboration for a safe and productive digital transformation of work.

Expected results and outcomes

At the end of the campaign cycle, it is expected that the knowledge and information developed and promoted under this activity has been disseminated to the main target groups and that it will have contributed to establishing a prevention culture regarding the digital world of work across the EU and beyond. By then, the Agency should have become a key reference point for the prevention and management of OSH in the digital world of work, by providing a gateway to the most important resources in this field.

Main outputs and actions

-

²⁵ https://ec.europa.eu/info/strategy/priorities-2019-2024/europe-fit-digital-age_en_

EU-OSHA provides publications and campaign products to support the campaign, undertakes campaigning actions a supports focal points for the development of campaign actions in the Member States.

Indicators	Latest result 2022) ²⁶	Target (2023-25)	Means	Frequency

4.10 HWC 2026-2028 Mental health at work with a focus on new and overlooked occupational groups, sectors and areas

EU-OSHA's Management Board decided in December 2022 that the HWC 2026-2028 will be on mental health at work with a focus on new and overlooked occupational groups, sectors and areas and in June 2023 the decided that it should be run on a three-year cycle. In 2023 the preparation of the campaign started with a close involvement of the key stakeholders, particularly the Management Board, so that in June 2024 the final campaign strategy, defining objectives, target groups, priority areas and communication tools, can be adopted by the Management Board and inform the implementation of the campaign. Based on the campaign strategy the Agency will then start developing the visual identity and the campaign core products, including the campaign guide and the campaign website.

A significant part of the content for the campaign will come from the OSH Overview on mental health and psychosocial risks (activity 2.12). The campaign would address the issue of how working conditions affect workers mental health, with a focus on new and overlooked occupational groups, sectors and areas.

The campaign will contribute to the Commission's comprehensive approach to mental health²⁷, in particular the effort to tackle psychological risks at work.

_

²⁶ The 2022 results refer to the HWC 2020-2022 on musculoskeletal disorders. Where applicable, source is EU-OSHA Stakeholders' survey 2022 and other surveys with users and stakeholders carried out in 2022.

Goal

To be defined in the framework of the HWC Strategy.

Operational Objectives

To be defined in the framework of the HWC Strategy.

Expected results and outcomes

To be defined in the framework of the HWC Strategy.

Main outputs and actions

To be defined in the framework of the HWC Strategy.

4.7 Awareness-raising actions & communications

This activity is focused on communicating and raising awareness on OSH, the Agency and its projects, products and services by targeting and engaging intermediaries primarily among the OSH and policy-making communities and via our network communications approach reaching out to workplaces and EU citizens in general. To this end, the communication and promotion actions undertaken use both traditional channels and tools (websites, publications, press office) as well as more innovative ones (such as data visualisation tools, Napo, social media and film screenings and debates). EU-OSHA is actively collaborating with other EU Agencies, as well as with the European Commission and other institutions in co-promotion actions for topics of common interest, via our website(s), joint publications and social media channels. This cooperation will be particularly focused on the key priorities included in the European Pillar of Social Rights and the EU Strategic Framework on Health and Safety at Work 2021-2027, such as Vision Zero, the Beating Cancer Plan, the Comprehensive approach to mental health, preparedness, the digital and green transition, etc.

Via the FAST programme, EU-OSHA will continue to provide logistical support to focal points and their networks in implementing OSH-related awareness-raising, communication and promotional activities and events related to EU-OSHA's work and context-relevant OSH themes at national level, thereby ensuring widespread coverage adapted to the needs. Participants' feedback has evidenced high satisfaction with such events. Starting in 2020 as a response to the COVID-19 pandemic, the Agency has been offering focal points the possibility of organising online and hybrid (mix of online and physical) events for all FAST activities wherever possible.

With the piloting of a three-year HWC cycle from 2020-2022, now also for HWC 2023-25 and the future HWC 2026-28, the Agency wants to increase its efforts on communicating and promoting its policy-facing activities, this need having been evidenced by several evaluations.

Goal

To raise awareness about the importance of OSH and the work of the Agency among the OSH community as well as among a wider set of beneficiaries and intermediaries beyond the Agency's primary audiences.

Operational Objectives

The Agency will:

- Deliver effective communication actions for both policy-facing and workplace-facing activities including further development of its website, management of its press office (and media partners), participation in relevant events and exhibitions and delivery of publications and information to inform and raise awareness about OSH among selected audiences (intermediaries and beneficiaries);
- Carry out awareness raising actions and focused promotion and communication actions dealing with specific topics characterised by a more targeted use of social media channels;
- Participate in the development and promotion of Napo films and the Napo website.

Expected results and outcomes

Intermediaries continue implementing a high number of good quality awareness raising actions (communicating and promoting OSH) among their networks and at workplace level, leading to a high level of OSH awareness. It is also expected that this activity will facilitate sharing of OSH knowledge

among intermediaries and beneficiaries and building a critical mass of new partners/networks interested in OSH, ready to disseminate and communicate the Agency's messages.

Indicators	Latest results (2022) ²⁸	Target (2024)	Means	Frequency
Promotion: Number of promotion and dissemination activities per year	897 (2022 target: 600)	600	Monitoring reports	Annually
Promotion: Number of events organised by the Agency (under the activity and under FAST)	203 (2022 target: 140)	80 ²⁹	Monitoring reports	Annually
Reach via websites	3.339,773 visits	3.000.000 visits	Web statistics reports	Annually
Usefulness of FAST events	99%	80%	Surveys	Annually

Main outputs and actions

Under this activity, external communication actions such as online promotion, website maintenance, publication programme and events implemented.

EU-OSHA will also provide support to focal point events and actions related to the Agency's activities via the FAST scheme.

4.8 Multilingualism

As a European Union OSH information agency running awareness raising campaigns in more than 30 countries, EU-OSHA subscribes to the language policy of the European Union, especially the right of EU citizens to receive appropriate information in their language. The activity "multilingualism" covers the planning and implementation of the multilingual aspect of EU-OSHA's communication approach. This includes the provision of translated texts as well as the review and revision of its multilingual practices. The Agency aims to maximise the effectiveness of its available budget for translations by involving its national focal points in the prioritisation of texts for translation (portfolio approach) and by working both with the Translation Centre (CdT) and the focal points to deliver high quality translations and to manage its multilingual websites and products. Whereas focal points make large use of the portfolio offer (in 2023: 26 out of 28), there is also widespread consensus that translating the Agency's products into national languages is key to getting the OSH messages across.

Goal

To contribute to better reach the intended target groups of the Agency's work by providing access to language versions of the Agency's materials taking into account national focal point needs and priorities.

Operational Objectives

This activity will provide good quality translations of Agency information based on needs and cost assessments. Focal points play a key role in assessing the needs for translations.

Expected results and outcomes

Translated products will have contributed to broaden the engagement in EU-OSHA activities and to a higher uptake of the work of the Agency.

_

²⁸ Where applicable, EU-OSHA Stakeholders' survey 2022 and other surveys carried out with stakeholders and users in 2021.
²⁹ With the three-year HWC cycle and the different distribution of Agency's resources allocated to the FAST programme, the target

for events for non-HWC activities for 2024 is 80. In 2023, 75% of the FAST budget were allocated to non-HWC activities, whereas in 2024 it is 25%. The latest results for this indicator relate to 2021.

Indicators	Latest result (2022)	Target (2024)	Means	Frequency
Relevance to needs – Focal points participating in the portfolio scheme	26 out of 28	22 out of 28	Monitoring reports	Annually
Usefulness – Focal points assessment: EU-OSHA's translated products are key to get the OSH messages across at national level	93%	80%	Surveys	Annually

Main outputs and actions

Under this activity, products of the Agency will be made available in different EU languages taking into account varying needs/demands of the national focal points.

Priority area 5: Networking knowledge

5.3 Networking Knowledge

This activity complements the actions on exchange of information and good practice at policy-making level and concerning strategies, programmes and other interventions and aims at facilitating an informed debate on OSH. Under this activity, the Agency will continue to provide knowledge-based support to the Commission, other Institutions and key stakeholders when requested, to strengthen the evidence base for their decision-making and to provide them with the input necessary for their policy work.

EU-OSHA will continue to give assistance to the Commission in its follow-up on the ex-post evaluation of EU legislation on OSH. It will provide relevant technical, scientific and economic information necessary for the preparation of possible legislative initiatives and follow-up actions and support in implementing the Strategic framework on Safety and Health at Work. This will include contributions regarding Occupational Exposure Limits (OELs), the amendments of the carcinogens mutagens and reptrotoxicants Directive (CMRD) and the chemical agents Directive (CAD), the asbestos at work Directive (AWD), occupational biomonitoring and the follow-up to the Covid-19 pandemic in particular with regard to the biological agents Directive, as well as the revision of the Workplaces and Display Screen Equipment Directives. EU-OSHA continues to cooperate with ECDC since the pandemic on issues related to Covid-19 and more recently zoonotic diseases, including zoonotic influenza.

As from the early days of the COVID-19 pandemic outbreak, EU-OSHA has undertaken key initiatives, which are expected to continue such as the cooperation with the Senior Labour Inspectors Committee and the Advisory Committee on Safety and Health at Work. EU-OSHA will continue to support the Commission in assessing the effects of the pandemic, in particular by organising expert discussions related to its recent research and publications. These will focus on those related to exposure to biological agents at work and pandemic preparedness at work as well as its Covid-19 prevention guidance and related information collected from its networks, in particular the national Focal Points. Cooperation with ECDC and with ELA will also continue. In supporting job retention and return to work strategies in the case of chronic illnesses, including in particular 'long Covid', EU-OSHA is carrying out projects and providing new information regarding 'long Covid'. EU-OSHA will also continue its cooperation with DG SANTÉ and EEA regarding the climate change observatory.

During the Covid-19 pandemic, the OSHwiki platform proved useful to provide relevant and timely resources to workplaces to assess and mitigate the risks. Following a complete revamp of the OSHwiki webpage in 2022, EU-OSHA will continue to update the current stock of OSHwiki articles in English.

EU-OSHA will continue its liaison with (occupational) biomonitoring activities and networks: follow-up initiatives of HBM4EU³⁰ (currently PARC (the European Partnership for the Assessment of Chemicals³¹), the International Society of Exposure Science (ISES) and OECD initiatives and provide information on national biomonitoring practices and policies to inform guidance on occupational biomonitoring.

Collaboration with the other parties of the Carcinogens Roadmap will continue. The Agency will furthermore liaise with the members of the IPChem initiative, such as DG EMPL, JRC and EEA to explore the possibilities for incorporation of data on workplace chemicals exposure, as described in the Commission's HazChem@Work study.

Furthermore, the Agency will continue to foster research collaboration, exchange of information across policy areas and support the development of e-tools and raise awareness about their use and collaborate with DG RTD to support the inclusion of relevant OSH and occupational health issues into research framework programmes (Horizon 2020). The Agency will also continue to provide up-dated information on EU OSH legislation and on non-binding instruments, such as guidelines, as well as social dialogue initiatives, and contribute to provide an overview of new national OSH strategies following the new EU strategic framework for safety and health at work. A concrete action for 2024 will be the

³⁰ HBM4EU is a joint effort of 30 countries, the European Environment Agency and the European Commission, co-funded under Horizon 2020. Running from 2017 to 2021, HBM4EU generates knowledge to inform the safe management of chemicals and so protect human health in Europe. See https://www.hbm4eu.eu/ for further information

³¹ The European Partnership for the Assessment of Risks from Chemicals (#EU_PARC) is one of the projects selected for funding by the European Union's "Horizon Europe" framework programme for the 2021-2027 period. Coordinated by ANSES, this major project is seeking to develop next-generation chemical risk assessment in order to protect health and the environment. https://www.anses.fr/en/content/european-partnership-assessment-risks-chemicals-parc

development of an OSH funding guide for OSH stakeholders. The expert exchange programme will further seek to stimulate knowledge transfer between OSH organisations in the member states.

Goal

To foster an informed debate and decisions on relevant OSH themes by providing an information-based resource and platform for debate, facilitating the exchange of information on OSH research, policy and practice.

Operational Objectives

This activity will:

- Foster research collaboration across Europe in order to coordinate and prioritise topics and exchange information across policy areas.
- Support the European Commission by mapping, gathering and disseminating information on Member State OSH strategies, providing support on the follow up to the ex-post evaluation of OSH legislation, assisting in assessing the effects of the Covid-19 pandemic and providing information on policies and practices and guidance related to occupational biomonitoring.
- Seek further cooperation with the Senior Labour Inspectors Committee and the Advisory Committee on Safety and Health at Work.
- Engage the OSH community through an enhanced interactive platform, OSHwiki and ensure that the content is up to date.
- Maintain the e-guides that are available on the Agency's website and disseminate findings from past OSH Overviews.
- Enhance cooperation with European agencies in particular as relates to the lessons learnt from the COVID-19 pandemic and the effects of climate change.
- Support the development of e-tools for OSH management by facilitating exchange of good practices between developers and national authorities and raising awareness about their use.

Expected results and outcomes

Through its support to the European Commission, EU-OSHA will continue to play a key role in contributing to the main policy and research priorities debate on OSH by direct contributions and by facilitating increased interaction across policy areas and with OSH professionals, institutes and other organisations. Via the OSHwiki, effective dissemination of the Agency's policy work is ensured as a complement to the main promotion and communication channels. This is expected to lead to better informed policy-makers and researchers and to increased interaction among key actors, including exchange of good practice at policy level on OSH.

Indicators	Latest result (2022) ³²	Target (2024)	Means	Frequency
Relevance to needs	100%	80%	Surveys	Annually
Usefulness	94% (OSHwiki)	80%	Surveys	Annually
Impact	76%	70%	Surveys	Annually
EU added value	100%	80%	Surveys	Annually

Main outputs and actions

With this activity, the Agency will engage the research and OSH community via workshops and seminars and support the Commission in a variety of areas, including the follow up work to the ex-post evaluation of OSH Directives, the mapping of national strategies and the assessment of the COVID-19 pandemic. OSHwiki articles will continue to be published and/or reviewed to ensure continued relevance. Expertise related to e-tools will be exchanged.

³² EU-OSHA Stakeholders' survey 2022 and other surveys with users and stakeholders carried out in 2021.

Priority area 6: Networking

6.4 Strategic and Operational Networking

This activity covers networking actions targeted at key stakeholders of EU-OSHA which are of great importance to the Agency, both for strategic purposes and operational ones.

The key strategic stakeholders are the Management Board and its three groups (governments, unions and employers' associations) and the Commission, the Executive Board, the Advisory Groups and the European level stakeholders (EU Institutions, EU level social partners, European Social Dialogue Committees, SLIC and other EU agencies). Effective strategic networking is necessary to ensure that the Agency addresses the right needs and to engage key stakeholders in the development and take-up of its work.

Together with its Management Board, EU-OSHA will initiate discussions on a future EU-OSHA Strategy that take into account developments since the current strategy was formulated and also foreseen trends and developments in the short to medium term. Having a strong consensus with key stakeholders on the strategy will be important to ensure effective and efficient implementation of future work programmes.

On the other hand, the Agency's focal point network is the key operational network playing a decisive role in delivering the work programme. The focal point network is complemented by expert networks, and the international networks and organisations (including ILO and WHO) with whom the Agency works. Established by the Agency's founding regulation and nominated by each Member State government as EU-OSHA's official representative in that country, the focal points are typically the competent national authority for safety and health at work and are primary contributors to the implementation of the EU-OSHA's work programmes. Within the framework of an annual agreement, the Focal Points coordinate and transmit information to be supplied at national level to EU-OSHA, having taken into account the views of social partners. In addition to the Member States, EEA-EFTA States (Norway, Iceland, Liechtenstein) also have fully integrated focal points with the network complemented by a focal point from Switzerland and from the countries covered by the Instrument for Pre-Accession. The national focal point coordinates a national tripartite network reflecting national systems and structures, this engagement of social partners at national level is essential in ensuring the success of EU-OSHA activities and the implementation of EU-OSHA's Strategy. The network not only allows for the knowledge transfer to and from national and EU levels, it also facilitates information sharing between States.

In 2022 and 2023 the Agency undertook a major review of the focal point network to ensure that it is ready for the new challenges in a post-pandemic EU. The review has covered a number of areas, communication between EU-OSHA, focal points and focal point managers, raising the profile of focal points and focal point managers, improving the support to focal points and focal point managers, and improving work planning, implementation and monitoring. In 2024, the focal point network should therefore be in a good position to continue being the main operational EU-OSHA network.

EU-OSHA will continue to build collaboration with the Senior Labour Inspectors Committee (SLIC) on concrete actions. EU OSHA is actively participating in the SLIC thematic days

Close cooperation with other agencies where relevant will be continued to exploit synergies and avoid overlap. With a number of agencies, strategic cooperation has been established via mutual representation in Management Boards and/or consultations on draft single programming documents. The latest examples of this are the frameworks for cooperation signed between EU-OSHA and ELA in 2022 and between EU-OSHA and Cedefop in 2023. With Cedefop, cooperation has particularly been developed in relation OSHVET (see below) and the OSH Barometer. There is also well-established cooperation at the activity level, for example on research methodologies, joint analysis of data and joint dissemination events. EU OSHA liaises with SLIC and ELA to ensure that their different roles are complementary and coherent in the area of labour inspection.

Active participation in the various formalised networks between agencies under the Heads of Agencies' network will continue. Via these networks, EU-OSHA has the possibility to contribute to the overall dialogue on agencies and also share knowledge with other agencies.

Internationally, EU-OSHA continues to be on the steering committee of the Global Coalition on OSH, created at the 2017 World Congress in Singapore. For more information on EU-OSHA's international activities, please consult Annex XII.

Run by EU-OSHA, the OSHVET project aims to capitalise on the strengths and the synergies of the EU-OSHA Focal Points, the network of the European Association of Institutes for Vocational Training (EVBB) and the network of the European forum of Technical and Vocational Education and Training (EfVET) to raise awareness on the importance of OSH in EU vocational schools. During the 2023 EU year of Skills cooperation with other agencies under the remit of DG EMPL, CEDEFOP and ETF has been reinforced, above all in the frame of the OSHVET project, mainstreaming OSH into vocational education and training.

Finally, EU-OSHA will continue collaborating with the Enterprise Europe Network (EEN) within the strategic partnership established with DG GROW and EISMEA as this network continues to be an effective vehicle for reaching businesses, and, in particular, small and medium enterprises.

Goal

Put in place effective governance structures to ensure that the strategic direction and the work of the Agency are aligned with European policy priorities and the priorities of the stakeholders of the Agency; to further develop effective implementation structures so that stakeholders - particularly, intermediaries - actively support and participate in the work of the Agency.

Operational Objectives

This activity will:

- Implement networking actions (meetings, events, tools, etc.) targeted at all identified stakeholders and establish a channel for the stakeholders to communicate their priorities to the Agency as well as engage the stakeholders in the implementation of the Agency's work.
- Further develop tripartism in governance and implementation structures, which is seen as a key
 objective. Key stakeholders are those represented in the Management Board, European level
 stakeholders (European Institutions, European Social Dialogue Committees, EU Agencies), the
 Focal Point network and international organisations.

Expected results and outcomes

- Stakeholders assess that the work of the Agency is relevant to the most important OSH needs in Europe;
- Stakeholders actively support the work of the Agency;
- Tripartism continues to be a pillar of the work of the Agency;
- Strategic decisions are well-informed and evidence-based.

Indicators	Latest result (2022)	Target (2024)	Means	Frequency
Engagement	88%	80%	Surveys	Annually
Quality of meetings	96%	80%	Surveys	Annually

Main outputs and actions

EU-OSHA will deliver various networking actions under this activity to engage its strategic and operational network partners.

Horizontal area 1: Corporate management

Management & control

Under this activity, the key priorities are the implementation of the 2024-2026 Single Programming Document and 2024 budget as adopted by the Management Board. The Management of the Agency will monitor implementation closely and report to the Executive and Management Boards on a regular basis.

EU-OSHA will continue to base the implementation of its annual work programme on the principles of Activity Based Management.

Goal

Ensure that the Agency can rely on an effective management and internal control system in place.

Operational Objectives

Implement actions aimed at striking a fair balance between control and effective management and ensuring compliance with the regulatory framework.

Expected results

The Agency maintains its good relations with external and internal auditors and improves management and supervision systems.

Output statement:

Under this activity, general management of the Agency as well as internal control, data protection, business continuity and risk management actions will be undertaken.

Indicators	Latest result (2022)	Target (2024)	Means and frequency of verification
Degree of implementation of the work programme ³³	98%	90 %	Planned outputs delivery – all work programme/annually

Legal advice

The Legal Service continues to provide quality legal advice to the Agency in all its areas of activity.

Programming and evaluation

EU-OSHA aims at ensuring high quality in its programming, monitoring and evaluation systems. The programming systems ensure that the activities reflect the needs among the stakeholders and that resources are efficiently allocated. This is articulated in the Single Programming Document. Throughout the implementation phase, various monitoring systems provide information on progress in implementation of plans. Finally, the Agency implements its multi-annual evaluation plan within the scope of its evaluation policy to ensure accountability and learning in addition to standard annual reporting such as the consolidated activity report. The Agency will keep on ensuring the full implementation of the Commission guidelines from April 2020 for the Single Programming Document and the Consolidated Annual Activity Report³⁴.

³³Percentage of outputs for the year delivered taking into account the degree of finalization via a set of key milestones. If one output item in the programming document covers more outputs (e.g. "three articles"), each of the outputs is counted separately.

³⁴ Cf C(2020) 2297 final Communication from the Commission on the strengthening of the governance of Union Bodies under Article 70 of the Financial Regulation 2018/1046 and on the guidelines for the Single Programming Document and the Consolidated Annual Activity Report

Exchanges and joint projects with the other Agencies (within the Employment area and beyond) will continue, in particular with regard to the area of performance management and measurement. Synergies will also continue to be ensured early in the programming phase.

In 2024 a specific priority will be to follow-up to the Commission's evaluation of the agencies in the employment and social affairs field, which will be based on the evaluation study expected to be finalised in 2023. In addition, stakeholders' feedback will be collected and analysed in the framework of the biennial stakeholders' survey.

Goal

Provide good quality programming, monitoring and evaluation information with the involvement of relevant stakeholders.

Operational Objectives

Comply with the legal requirements, most notably the production of a Single Programming Document in line with the guidelines, an annual activity report and ex-ante and ex-post evaluations as foreseen by the Financial Regulation.

Ensure accountability towards the Management Board and external stakeholders.

Expected results

- The Agency is regarded as an accountable organisation
- The Agency implements activities reflecting the best use of available resources
- The Agency has established an internal learning culture

Output statement

Under this activity programming, monitoring and reporting documents and information will be produced.

Indicators	Latest result (2022)	Target (2024)	Means and frequency of verification
Timeliness of statutory documents	100 %	100 %	Single Programming Documents and Annual Activity Reports delivered within foreseen deadlines

Horizontal area 2: Administrative support

Goal

Provide the services and goods that are necessary for EU-OSHA to deliver its mandate and work programme: human resources, finance/ budget and accounts, building facilities, information and communication technologies, general services, and documentation management. Continue pursuing efficiency measures towards leaner and more effective processes. Continue modernising processes and tools for the provision of services and goods.

Operational Objectives

Effective and efficient management of resources in compliance with the Agency's mission and objectives, Staff regulation and Financial regulation.

Efficiency gains and increased reliability through integration of ICT tools made available by the Commission.

Organisational development actions together with talent management and workforce planning will focus on improving the effective development and deployment of its staff and optimising the work organisation and processes.

Expected results

The Agency is regarded as an accountable, efficient and effective organisation, making optimal use of all its resources in alignment with organisational needs.

Amongst others, recruitment and development activities provide and nurture talents and skills that allow EU OSHA to carry out its mandate and allow staff to perform towards their potential effectively.

Output statement:

Under this activity, various administrative services in the areas of ICT, human resources, finance, documentation and infrastructure will be provided.

Indicators	Latest result (2022)	Target (2024)	Means and frequency of verification
Budget Implementation	99%	95%	Annual reporting
Staff capacity	98%	95 %	Annual reporting

Descriptive information and justification on:

1. Budget outturn 2022

EU-OSHA has in place a monthly budget reporting which makes possible tight management of the agency needs in budget appropriations and cash management. Every time the Agency calls EU funds, EU-OSHA submits to the European Commission budget forecasts considering the actuals needs in appropriations (C1) and the cancellation of carry-forward (C8). Based on a last forecast calculated early December considering the needs in C1 appropriations for the year 2022, the cancellation of payment appropriations for legal obligations raised in 2021 (C8) and all recorded budgetary incomes, EU-OSHA managed to get a budget outturn of 1.7% of total C1 appropriations. Budget outturn 2022 is estimated at 289,254€.

In 2022, EU-OSHA returned the amount of 7,271 € to DG NEAR for the earmarked project IPA 2026 Programme. Related revenue and expenditure were earmarked (IR1-R0). Therefore, the impact on the budget outturn is null.

2. Cancellation of commitment/payment appropriations 2022

Final budget implementation (commitments) for the appropriations of the year 2022 (C1) is 98,7% whereas the final execution (payments) is 72,1%. Remaining payments are to be made in 2023. The general level of cancellation (1.6%) for appropriations C1 & C8 is below the 5% threshold and directly related to the implementation of its annual appropriations for both administrative and operational budget (98.7%) and a cancellation rate of 2.4% for C8 appropriations.

⁴⁰ In total 15 countries are represented and figures in this table do not include the 2 short-term contracts for FTE offsetting.

Table 2 - Evolution over 5 years of the most represented nationality in the Agency

Most represented nationality	N-5 (2	2018)	N-1 (2022)		
	Number	%	Number	%	
SPAIN	27	43%	29	46%	

EU-OSHA is an equal opportunity employer and considers candidates for employment without distinction on the grounds of gender, colour, racial, ethnic or social origin, genetic features, language, religion or belief, political or any other opinion, membership of a national minority, property, birth, disability, nationality, age, sexual orientation or gender identity.

The Agency has implemented additional measures aimed at further integrating family members of international staff with the offer of local language training courses, social activities support, and is exploring the possibility to expand the provision of relocation and settling-in support services.

The Agency is conscious of the need to diversify its staff and to this effect ensures equal treatment in recruitment and reclassification.

EU-OSHA will analyse from which countries staff are underrepresented and take actions to better promote vacant posts in these countries.

The high number of Spanish staff is mainly due to the conversion of local staff in Contract Agents staff, as required by the previous Staff Regulations Reform that entered into force on 1 May 2004. A seat agreement with the Kingdom of Spain, signed on 31 March 2014, should help attract candidates from outside Spain by facilitating their integration into the local community.

With regard to the increase between 2018 and 2022 of Spanish employees, it has to be noticed that it does derive both from recruitment and from changes of nationality from UK to Spanish of existing staff.

A. Schooling

Agreement in place with the European School(s): n/a					
Contribution agreements signed with the EC on type I European schools	Yes		No	х	
Contribution agreements signed with the EC on type II European schools	Yes		No	х	
Number of service contracts in place with international schools:	service contracts in place with international				

Description of any other solutions or actions in place:

Schooling is a key factor in fostering multilingualism and enabling EU-OSHA to attract and retain qualified staff members. There is no European school at the Agency's seat, Bilbao. Consequently, the Agency pays the education allowances in line with the provisions of the Staff Regulations. No extra allowance is allocated to its staff in this regard.

In addition to local schools in Spanish and Basque language, international schools are located within the city and its outskirts; these help the Agency to attract a more diverse workforce although the offer is still relatively limited. The Agency is committed to continue fostering its multilingual environment and providing a multicultural education for the children of its staff.

Annex VI – Environment Management

EU-OSHA always aims to improve its environmental performance and lower the impact of its operations on the environment. In this line, EU-OSHA is strongly committed in the development and application/adoption of specific measures/practices regarding environmental management that contribute to ensure cost-effective and environment-friendly workplaces. In 2023, EU-OSHA will develop a strategic approach to sustainability which will include the consideration of clear targets monitored by KPIs and a green dashboard.

The pandemic helped strengthen a number of developments which are now part of the Agency practice. One of these is the increased use of virtual or hybrid meetings instead of face-to-face meetings leading to a significantly lower travel activity. EU-OSHA's Management Board has decided that EU-OSHA shall continue using a mix of virtual, hybrid and face-to-face meetings. In parallel, EU-OSHA is reducing the missions of its staff which has the same effect. Finally, the introduction of structured teleworking has reduced the daily commuting by staff.

EU-OSHA does not own and operate its own building and facilities but instead occupies rented office space. The scope for environmental improvements is therefore comparatively limited. Nevertheless, a lot of measures have been - and will continue to be implemented to ensure the Agency reduces its footprint on the environment, including energy efficiency initiatives. The Agency also maintains regular exchanges with the landlord to identify and pursue opportunities for the further environmental improvement of the building infrastructure.

Within the remit of EU-OSHA's own office, facility and staff policies and processes, the Agency continues to implement actions to reduce the impact of its administrative operations on the environment. On a regular basis EU-OSHA raises awareness among its population (e.g. staff, contractors, visitors, among others) on the measures developed and to be implemented. The Agency monitors, to the extent possible, also the related data in order to set goals for improvement towards:

- a smarter, greener and more efficient use of its facilities; and,
- a modern, agile and digital administration.

During the course of the years already several steps have been taken to ensure the Agency continues to move in the right direction towards limiting its footprint. The Agency will continue in this direction by encouraging and raising awareness among its staff, contractors and visitors on environment management measures.

Direct measures in place so far:

Lighting upgrade:

- Phase-out of incandescent and halogen bulbs and fluorescent lighting towards more efficient led technology.
- <u>Existence of double-switch lighting system in all offices allowing reduced light intensity when not required</u>
- Existence of lighting activated by presence-sensors in common use facilities.

Energy efficient purchases

- <u>Use of environmental requirements / criteria</u> at procurement level to ensure green solutions as far as possible.
- Purchase of energy efficient appliances for kitchenettes areas.

Occupant behaviour and education

• Requested responsible and efficient use of resources to staff and set as a minimum requirement in all procurement actions (e.g. cleaning services and products).

- Raising awareness: through regular emails to all staff on existing and new initiatives/measures, as well as notices/posters placed throughout the premises to the attention of its population for the same purpose (e.g. lighting, air conditioning system, among others)
- <u>Active contribution to the "circular economy"</u> through, among other actions, regular donation and recycling exercises and re-use of furniture pieces in spare parts.

Indirect energy efficiency measures

The Covid-19 pandemic forced the adoption of exceptional remote working conditions with the implementation of the telework and a consequent decrease in commuting. This new situation has in turn accelerated the agency's adoption of e-tools, allowing the drastic reduction of printed documents, shipping and delivery costs, consumption of stationery supplies, commuting costs, building energy costs etc. Main examples on this front are:

- Adoption of e-procurement tools and compulsory use of e-Tendering and e-Submission in all our procurement processes;
- Shift to more online and hybrid meetings where EU-OSHA is the organiser, reducing drastically travel, printing of documents related to presentations
- · Reduced number of missions by Agency staff
- e-signature and e-workflows in all internal and external communications
- EU-OSHA as an active member of the Greening Network (GN) of the European Agencies and Bodies.
- The GN is a forum for discussions and for sharing views and best practices on environmental and energy efficiency matters. It is also a place for sharing views on how to deploy environmental awareness and responsibility, as well as present issues and practical cases related to EMAS implementation.

Annex VII – Building Policy

Present value of the building	N/A	

Annex VIII – Privileges and Immunities

EU-OSHA signed a Seat Agreement with the Kingdom of Spain on 31 March 2014.

	Privileges granted to staff					
Agency privileges	Protocol of privileges and immunities / diplomatic status	Education / day care				
VAT Exemption	The Agency's staff is accredited with the Spanish Ministry of Foreign Affairs with non-diplomatic status with the exception of the Executive Director					
Subsidy from the Kingdom of Spain up to a max. of 100,100 € per year as a contribution to rent related expenditure.	Non-Spanish staff members are entitled to VAT exemptions for purchases of goods and purchase of one new car during the first year of service.					

Annex IX - Evaluations

EU-OSHA has a well-established monitoring and evaluation system in place in order to ensure the necessary information for accountability, management and learning purposes.

Monitoring system

EU-OSHA monitors its activities on the basis of predefined performance indicators as well as in the form of narrative reports. Monitoring is carried out internally but also by the Management and Executive Boards who are informed three times per year on the status of the implementation of the annual work programme. Finally, the Management Board provides an annual analysis and assessment of the Executive Director's Consolidated Annual Activity Report.

Performance indicators are defined at three levels by the Management Board (activity, priority area, and the Agency). Indicators for the activities are adopted by the Management Board as part of the Single Programming Document (Annual Work Programme). Revised indicators for the priority areas linked to the strategic objectives (cf. chapter II.2) and for the Agency linked to the mission and vision (cf. the chapter "Mission and vision statement") were formulated by the Management Board in 2018 and have been used as from 2019. The basis for EU-OSHA's performance indicators is a clear logic model linking inputs, activities, outputs, outcomes and impacts.

Evaluation system

In 2015 the Agency adopted an evaluation policy and procedure. A multi-annual evaluation plan which covers the timeframe of the SPD has been adopted in accordance with the evaluation policy and the requirements of EU-OSHA's Financial Regulation. All activities included in the present SPD are expected to undergo either an ex-post or a mid-term evaluation and new, significant activities will only be included after a prior ex-ante evaluation. The mid-term or ex-post evaluations may increasingly be implemented as thematic evaluations covering several activities. The policy and procedure establish a harmonised approach to evaluation and a systematic follow-up on the conclusions from the evaluations.

Follow-up to evaluation findings

In April 2019, the Commission published its Staff Working Document (SWD)⁴¹ on the evaluation of the four agencies (EU-OSHA, Eurofound, ETF and Cedefop) in the policy field of DG EMPL. The conclusions on EU-OSHA are very positive and the good performance of EU-OSHA is recognised throughout the evaluation and the SWD. However, the SWD includes a number of recommendations – most of them directed at the four agencies in common, and a few directly targeted at the individual agencies. The Management Board of EU-OSHA adopted the following action plan in January 2020 which was amended in June 2020. The action plan has been fully implemented, see the final status as of December 2021 below. The Commission has undertaken a new evaluation of the four Agencies in autumn 2022. At the time of drafting the final version of the current SPD, the evaluation is still underway. While the preliminary conclusions from the evaluation study from the Commission's contractor are positive for EU-OSHA, the Agency will analyse the Staff Working Document by the Commission upon its publication and design follow-up actions as required together with the Management Board.

⁴¹ Commission Staff Working Document, Evaluation of the EU Commission Agencies working in the employment and social affairs policy field: EUROFOUND, CEDEFOP, ETF and EU-OSHA, SWD(2019)160final

UPDATE OF ACTION PLAN ON FOUR AGENCIES' EVALUATION, NOVEMBER 2021

Common recommendations

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
	Service-level innovation (effectiveness and impact)				
1-2	1/ Improve the quality and relevance of research/monitoring reports and activities by:	1/ EU-OSHA's products score high on readability and focus, and the quality (including the relevance) of EU-OSHA's research and monitoring reports has been confirmed on several occasions via evaluations and stakeholder surveys.	1/ Develop quality procedure for development of knowledge	1/ 30/06/2021	Finalised – knowledge development framework and procedure adopted
	Improving the readability and policy focus of publications, in particular for non-academic users and policymakers and; basing the activities on a robust quality assurance process				
	2/ Improve the research/monitoring reports and activities by making use of the most effective means of communication/ dissemination. In particular:	2/ EU-OSHA has invested in the development of innovative data visualisations and dashboards. The key group for the Agency's communication efforts at the national level is the focal point group. EU-OSHA is among the leading agencies on social media activities and the social media efforts were evaluated in 2018.	2a/ Review the Agency's social media approach and develop a policy for EU-OSHA's social media actions	2a/ 31/07/2020	Finalised - social media policy in place

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
	Continue to explore and utilise innovative communication channels; further adapt communication activities to different target groups, and identify intermediaries who could support the dissemination of outputs and; better disseminate and use results at national level, in particular by encouraging Management Board members to take a more proactive role in disseminating and using results.		2b/ Strengthen communication efforts on OSH overview activities during the 3-year pilot Healthy Workplaces Campaign	2Ы/ 31/12/2020	Finalised. The 3-year pilot is under implementation, including the strengthened communication efforts on OSH overview activities.
			2c/ Encourage close relations between the focal points and the national MB members	2c/ Ongoing	To be seen together with the follow-up to recommendation 7
	Agency-level innovation (efficiency)				
3-5	3/ Revisit internal structures to better balance operational and administrative functions within the organisation	3/ EU-OSHA is continuously looking into its internal structure and work processes to identify efficiency gains.	3/ EU-OSHA will continue to look for efficiency measures, in particular paperless workflows, e-processes, business process re-engineering and simplification which will be part of the efficiency strategy	3/ 31/12/2020 (efficiency strategy)	Finalised. A number of measures – incl. e-signature – has been implemented and an efficiency strategy was included in the final version of the SPD 2021-2023.
	4/ Transparency in decision-making based on results of performance measuring systems could be introduced	4/ Results against performance indicators adopted by the MB are provided to the MB as input to decisions. Results are also included in Annual Activity Reports and communicated via the website.	4/ No further action suggested		

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
	5/ The agencies' performance measuring systems can be further aligned and made more comparable. They are advised to consider developing a more systematic approach to measuring use of their outputs at national level	5/ The four agencies have launched a joint project to explore the possibilities for aligning performance indicators.	5/ Take decision on proposal on common indicators	5/ 31/12/2020	Finalised.
	Governance				
6-8	6/ In cooperation with the Commission, to clarify the roles of the various institutional actors involved and provide training to Management Board members on the more technical issues within the boards' remit, such as the programming cycle	6/ EU-OSHA has a well-established practice of providing training once every year to new (and anyone else interested) MB members.	6/ Update EU-OSHA governance paper from 2017	6/ 31/12/2020	Finalised. Governance paper adopted at January 2021 MB meeting.
	7/ MB members could brief national stakeholder networks about the agencies' work, and the feedback received could inform members' work in the board	7/ The MB discussed how to take this recommendation forward at the MB meeting 23-24 January 2020. It should be recalled that EU-OSHA has focal points in MSs running national networks	7/ The MB will decide whether to recommend MB members to be part of national focal point networks	7/ 30/06/2021	Finalised at 2021 MB June meeting.
	8/ Electronic decision-making and, where appropriate, virtual meetings of the Management Boards could be further explored as a way to achieve more efficient and quicker decision-making.	8/ Good conditions for an informed dialogue is essential for good decisions. Therefore, the general rule will continue to be that decisions are taken in physical meetings. However, when necessary, written procedures will continue to be an option.	8/ MB to decide on the use of virtual meetings as a complement to physical meetings	8/ 30/06/2021	Finalised at 2021 MB June meeting.
	Reinforced cooperation				

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
9-14	9/ Corporate functions, such as strategy, human resources, legal and financial management, coordination and support services such as ICT could be shared. Logistical arrangements could also be shared as regards the Brussels Liaison Offices	9/ Shared framework contracts and services is one of the key efficiency measures in the area of horizontal functions, e.g. the shared evaluation framework contract. EU-OSHA also greatly benefits from sharing experiences and good practices with other agencies through the EUAN and its sub networks.	9 and 10/ Together with the other agencies, EU- OSHA will continue to explore possibilities for sharing corporate services and expertise, where it makes sense	9 and 10/ Ongoing	Ongoing collaboration with EUAN and other agencies to share contracts, expertise and services where feasible and economically advantageous.
	10/ On performance management, common or coordinated systems among the agencies would lead to cost savings, as detailed in 2, while respecting each agency's specific objectives.	10/ The most resource intensive elements of performance management are provided via shared services (framework contracts, ICT systems, networks). However, some other elements are not feasible to share - e.g. stakeholder surveys as the stakeholders are different.			
	11/ Mutual learning and sharing of services with decentralised agencies outside DG EMPL or with the Commission, and other forms of cooperation through the EU Agencies Network.	11/ EU-OSHA participates actively in - and benefits from - the EUAN and its sub networks. This is an important source of good practice for corporate functions	11 and 12/ No further action suggested		
	12/ Joint delivery where common tools and approaches exist, for example, managing expert networks and running surveys. Agencies may join efforts and resources without substituting specific targeted surveys carried out by the EMPL agencies.	12/ EU-OSHA has collaborated closely with Eurofound and Cedefop on enterprise survey methods and with Eurofound on the OSH content of EWCS. This collaboration will continue.			
	13/ Joint programming and planning could be put in place, but focused exclusively on areas suitable for cooperation and/or joint delivery.	13 and 14/ So far cooperation in the programming phase has focused on the annual work programmes.	13 and 14/ Agree with the other agencies and the Commission on the way forward	13 and 14/ 31/12/2020	Finalised. Agencies discussed further cooperation on this topic and outcome was

Santiago de Compostela 12, 5th floor - 48003 Bilbao · Spain Tel. +34 944 358 400 · Fax +34 944 358 401 information@osha.europa.eu · http://osha.europa.eu

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
					presented to MB at meeting in January 2021.
	14/ In practical terms, such reinforced inter-agency cooperation could be reflected by broadening and aligning the time-frames of the agencies' multiannual programming documents, since the annual work programmes will continue to be agency-specific				
	Policy support for the EU				
15-17	15/ The four agencies could aim to better align with and support EU policymaking. Work programmes must be flexible enough to allow for changes in the case of sudden reconfigurations of EU priorities.	15/ EU-OSHA will continue to aim at bringing its activities into line with EU policy priorities. However, the requirements re planning limits flexibility. EU-OSHA and the Commission have a well-established structure for communication and identification of upcoming priorities.	15, 16 and 17/ No further action suggested		
		That this is effective has been confirmed on several occasions, most recently with the Commission's opinion on EU-OSHA's 2020-2022 Programming Document.			
	16/ Negative priorities could continue to be a tool for addressing ad hoc requests. The agencies may consider introducing a more structured and formalised reprioritisation mechanism and embedding a certain room for manoeuvre in its programming document to allow for unforeseen activities of high policy relevance.	16/ Negative priorities cannot be identified in advance. EU-OSHA identifies necessary resources when requests come up taking into account the stage in the activity cycle of the different activities. The experience with these measures has been positive and has up to now allowed the Agency to accommodate new requests from the Institutions.			

Santiago de Compostela 12, 5th floor - 48003 Bilbao · Spain Tel. +34 944 358 400 · Fax +34 944 358 401 information@osha.europa.eu · http://osha.europa.eu

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU- OSHA	Time- frame	Status
	17/ Other adaptability instruments could be used, such as: a. adjusting the aims of tasks or projects at the implementation stage; b. designing intermediate project outputs to feed into policy discussions rather than waiting until the project ends; c. producing short-term deliverables and updates and further recalibrating ad hoc procedures so that they can be deployed relatively quickly	17/ The main flexibility measure EU-OSHA has available is stretching the time over which activities are implemented. EU-OSHA has adapted its OSH Overview approach so that deliverables are provided faster and in new formats			
	Policy support for Member States				
18	18/ Cedefop, Eurofound and EU-OSHA could broaden the scope of demand-driven support to the Member States on policy issues and initiatives high on the EU agenda, while striving to maintain the balance with their research function, which is a pre-requisite for successful delivery of the direct support.	18/ EU-OSHA will continue to support Member States within the areas of competence to the extent resources allow. Since 2011, the support to Member States has been mainly demand driven through EU-OSHA's portfolio programme.	18/ No further action suggested		
		Via its focal point network the Agency has an ongoing and effective dialogue with the Member States about needs and priorities.			

EU-OSHA recommendations

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU-OSHA	Time- frame	Status
24	EU-OSHA's practical approach, e.g. in developing tools for risk assessment or for tackling specific risks, could be emphasised over the general academic/policy research approach.	EU-OSHA distinguishes between its workplace facing work and its policy/research facing work. Its founding regulation makes clear it is supposed to address both. In addition the 2016 evaluation of EU-OSHA's strategy confirmed that its strategic goals continued to be relevant which was later confirmed in the 2018 stakeholder survey concluding that EU-OSHA has got the balance between different priorities right. This opinion is also confirmed in the Commission's feedback on EU-OSHA 2020-2022 Programming Document which 'recommends keeping such [current] prioritisation over the whole 2020-2022 programming period".	No further action suggested		
25	To effectively reach employers at workplace level, especially in SMEs, the agency is advised to continue to provide tools for information and communication so as to support national focal points in reaching relevant intermediaries	EU-OSHA will continue the HWC and OiRA - both highly successful in reaching towards the workplaces, including SMEs.	No further action suggested		
		Focal points will continue to receive support via the EEN - the EC's largest initiative aimed at providing support to SMEs in the EU. Further products specifically targeted at the needs of SMEs are and will continue to be provided			

Santiago de Compostela 12, 5th floor - 48003 Bilbao · Spain Tel. +34 944 358 400 · Fax +34 944 358 401 information@osha.europa.eu · http://osha.europa.eu

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU-OSHA	Time- frame	Status
26	A specific strategy, including adapted tools, could be developed to better reach SMEs as these are not always covered by intermediaries such as industry associations	EU-OSHA has a number of approaches to better reach SMEs covering dissemination, OCPs communication to their supply chains; e-guides; the EEN partnership	1/ Develop a specific SME strategy	1/ 31/12/2020	Finalised. MSE strategic approach presented to MB in January 2021
27	To improve the EU added value of its specific thematic knowledge, the agency could explore further opportunities for collaboration with the ILO and national OSH research institutes	EU-OSHA is committed to the Global Coalition on OSH and has collaborated recently with WHO/ILO on development of the estimation methodology for economic costs of OSH.	1a/ EU-OSHA is Steering Committee member of the Global Occupational Safety and Health Coalition launched in 2017 at the XXI World Congress on Occupational Safety and Health at Work in Singapore:	1a/ Ongoing	Ongoing. The agency helped disseminate the new WHO/ILO joint estimates on burden of work-related injury and disease.
		The collaboration with national OSH research institutes will continue - including with PEROSH.	Task Group leader OSH and the future of work		Ongoing.
		The Agency has launched an expert exchange programme open to OSH experts in Europe, including from national OSH institutes.	Joint leader with EC and ICOH on Task Group for a Multiregional OSH Information system		
		The possibility of signing memoranda with Eurostat and JRC is being explored	1b/ Meeting with ISSA Section on trade, examining synergies particularly on global supply chains and EU OSHA project on "supporting compliance"	1b/ April 2020	Finalised. Cooperation established with ISSA.

Recommendation number	Recommendation in Staff Working Document	Response by EU-OSHA	NEW actions by EU-OSHA	Time- frame	Status
			1c/ Participation in OSH World Congress, supporting ILO and ISSA in the dissemination of EU information in a global framework.	1c/ October 2020	Finalised. World Congress 2020 cancelled. EU- OSHA actively participated in the 2021 edition on-line.
			1d/ Cooperation with ILO and WHO on a joint project to develop a costing model for the estimation of burden from work-related injury and disease (pending approval from MB and EC)	1d/ Pending decision	Cancelled. Following investigation it has been concluded that EU-OSHA cannot commit resources to this project. However in the framework of the global coalition EU- OSHA collaborates with ILO and WHO on the topic.
			1e/ Annual review of strategy for international collaboration (annex to Programming Document)	1e/ Recurrent	Finalised. This is a recurrent annual exercise.
			2/ EU-OSHA will continue collaborating with national OSH research institutes where synergies are possible	2/ Ongoing	Ongoing. EU-OSHA continues to collaborate actively with PEROS and national research institutes.

Annex X – Strategy for organisational Management and Internal Control Systems

Risk management and Internal Control

The Internal Control function in EU-OSHA is responsible for coordinating and overseeing the implementation of internal control and risk management in EU-OSHA.

EU-OSHA carries out an annual risk assessment taking into account the inherent risk environment in which the Agency operates as well as specific activities and processes. At the corporate level, the assessment exercise involves the Executive Director and the senior management supported by Internal Control. For each of the identified risks, a coordinator is appointed to draft an action and coordinate its implementation. Internal Control monitors and reports to senior management quarterly via the risk register implementation action plan.

The Executive Director decides on the list of prioritised actions for the reporting year and allocates coordinators to the action plans. There is regular follow-up and reporting to the Executive Director and senior management by way of quarterly submission of status updates.

EU-OSHA's 'Internal Control Action Plan' and 'Corporate Risk Register' mapped to the Internal Control Framework are subject to regular reviews by senior management.

During the course of the year, the risk register and related reporting are regularly reviewed with feedback provided to agency's management. All risks monitored in the course of the year are categorised as either related to the 'internal' or the 'external environment' and by the level of criticality.

The Agency also participates in an annual peer-review risk assessment exercise which is organised by the Commission and the EUAN for the purpose of exchanging knowledge, harmonising risk assessments, and creating an overview of the critical risks affecting EU institutions and agencies in general.

Compliance and effectiveness of the Internal Control System

EU-OSHA will continue to implement the Internal Control Framework as adopted by the Management Board and effective as of 1 January 2019. The framework comprises of 5 internal control components and 17 principles and is based on the internal control framework of the European Commission.⁴² Key performance indicators for monitoring the Internal Control Framework have been developed, adopted and will continue to be used for the regular yearly assessments.

In the first quarter of every year, through the review of its KPIs, an assessment on the Internal Control Framework is undertaken. Results of the assessment show whether the Agency's control systems are functioning adequately for all its internal control components and whether additional actions are necessary.

Non-Conformity procedure

At the beginning of each year, the Executive Director also adopts the 'Non-conformity report' based on the nonconformities that were registered during the previous year and decides whether or not: (i) the procedure had been satisfactorily implemented; (ii) there were either material or critical events, (iii) the proposed steps to mitigate the resulting risks are adequate and (iv) what awareness raising activities on the nonconformity procedure shall be implemented.

Fraud prevention and detection

The implementation of the new Anti-Fraud strategy 2022-2026 is overseen by the Management Board by a regular monitoring of the action plan presented every year. It is based on a risk assessment focused on fraud risks as part of the broader risk assessment carried out by the Agency. The years 2024-2026 will be the core years of the implementation of the new Anti-fraud strategy, addressing the challenges and strengthening the Agency's measures and controls related to anti-fraud.

⁴² https://ec.europa.eu/budget/library/biblio/documents/control/C 2017 2373 Revision ICF en.pdf

Whereas the measures and controls already in place to ensure legality and regularity of the transactions (segregation of duties, four-eyes principle, procedures and checklists) are considered to address satisfactorily the identified fraud risks, the new strategy further develops an anti-fraud culture in the organisation and enhances existing internal procedures for the purpose of fraud prevention and improved fraud detection techniques.

Furthermore, an internal procedure for reporting and handling potential fraud cases and their outcomes – already in place – will continue to be made available to the staff on the Intranet. Raising awareness on ethics, integrity and fraud prevention and detection among staff is a standing priority at the Agency. Information on fraud prevention, ethics and integrity will continue to be provided via regular training sessions to all staff and systematically to all newcomers. Fraud risks are regularly assessed during the annual risk assessment exercise performed by the Agency.

Conflict of Interest, transparency, accountability and integrity

The Agency continues to give high priority to transparency and openness. Transparency for the Agency means clear identification of who decides what. There is a clear identification of responsibilities which is essential to build confidence in the Agency and to ensure accountability. In particular, the respective responsibilities of the Management Board, the Executive Board and the Executive Director are clearly defined. The Agency publishes on its website the list of members of its Management Board and Executive Board as well as the agendas and the minutes of the meetings to ensure transparency. Furthermore, the Agency has adopted a conflict of interest policy to ensure that decisions are taken in the interest of the Agency only. Declarations of interests and absence of conflict of interests as well as summary CVs from all Management Board members and Advisory group members are available online. Furthermore, declarations of absence of conflict of interests and summary CVs for the Executive Director and senior management staff are also available online.

The Good Governance aspects of the work of the Management have been further reinforced in 2022 by the reflection on Good Practices for the Management Board and its members. This reflection resulted in an adopted document on such good practices outlining what is expected in terms of impartiality, relations with media, conflict of interests etc.

Openness is incorporated in various ways. The planning procedure involves a high number of stakeholders – both the 84-member Management Board but also other stakeholders via a formalised stakeholder consultation procedure. It is in the Agency's own interest to be open as it is only in close collaboration with stakeholders it can implement its work programme. Furthermore, extensive consultation is an important contribution to ensuring that what the Agency does is relevant to the needs.

The Agency gives a high priority to putting organisational values into practice. To this end the Agency expects its staff at all moments to act objectively and impartially in the public interest. The Staff Regulations together with the implementing rules turn these principles into practice.

Management assurance

The Executive Director relies on the following building blocks of assurance:

- the existing measures to ensure legality and regularity of the Agency's underlying transactions, including ex-ante verification and ex post controls, regular checks on segregation of duties and specific measures to prevent and detect fraud and conflict of interest;
- the work of the Internal Audit Service and the Agency's follow up to the audit recommendations;
- the lessons learnt from the reports of the European Court of Auditors for the years prior to the year of this declaration;
- the assessment of the quantitative and qualitative nature of the non-conformities included in the register for every year;
- the Agency's performance management framework, which includes regular monitoring of performance indicators and planning and follow up to evaluations;
- the declaration of the Internal Control Coordinator based on their regular monitoring of the implementation of internal control systems at the Agency, including the assessment of the internal control framework against its indicators and the Agency's risk management policy.
- the declarations of assurance of the authorising officers by delegation.

Annex XII – Strategy for Cooperation with Third Countries and International Organisations

1. Legal base and policy base

The objective of the European Agency for Safety and Health at Work is to provide the Union institutions and bodies, the Member States, the social partners and other actors involved in the field of safety and health at work with relevant technical, scientific and economic information and qualified expertise in that field in order to improve the working environment as regards the protection of the safety and health of workers."

As one of its specific tasks, the Agency is required to "collect and make available information on safety and health matters from and to third countries and international organisations" and to establish a strategy for relations with third countries and international organisations concerning matters for which EU-OSHA is competent.

Article 30 of the founding regulation⁴³ states that EU OSHA may cooperate with the competent authorities of third countries and with international organisations. Working arrangements with these competent authorities and international organisations may be established with the authorisation of the Management Board and approval of the Commission. Such arrangement shall not create legal obligations incumbent on the Union or the Member States.

The EU Strategic Framework on Health and Safety at Work 2021-2027 identifies the need to reinforce coordination with engagement with partner countries, regional and international organisations and other international fora to raise OSH standards globally.

2 Strategic approach

In its engagement with third countries and/or international organisations, EU OSHA will remain within its mandate as set out in its founding regulation and the institutional framework. It will ensure that it does not appear to be representing the European Union.

2.1 Reasons for engagement

EU-OSHA engages with international actors to:

- Support the implementation of activities identified in EU OSHA programming documents,
- Ensure a coherent approach with international organisations,
- Raise the profile of the EU and EU OSHA as global leaders in occupational safety and health,
- Support existing and planned EU initiatives with international actors,
- Avoid duplication of effort with other EU actors and international actors, collaborating so that any intervention has maximum impact and delivers a common message,
- Support capacity-building in states to permit the promotion and adoption of the EU tripartite model
 of worker protection based on goal-setting legislation such as the "framework directive",
- Support the broad goals of EU external policies,
- Support the pre-accession process by facilitating the integration of these countries into EU OSHA networks and activities, and
- Support international activities led by international organisations that aim to achieve common occupational safety and health goals.

2.2 Priorities for EU-OSHA

EU OSHA will continue to work with the EEA and EFTA States (Iceland, Norway, Liechtenstein and Switzerland) under established arrangements through which these countries are integrated into EU OSHA activities.

⁴³ Regulation (EU) 2019/126 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 16 January 2019 establishing the European Agency for Safety and Health at Work (EU-OSHA)

The Agency will continue to participate in EU programmes such as the Instrument for Pre-Accession (IPA) and the European Neighbourhood Policy (ENP) actions where available and as foreseen in the EU Strategic Framework. EU OSHA has been running IPA projects since 2011, and participated in ENP actions between 2013 and 2015.

A new IPA agreement started in 2023 and will run for three years allowing EU-OSHA to continue its cooperation with the involved countries.

Ukraine, Moldova, and Georgia have changed status in regard to their relationship with the EU. However, at present IPA does not cover any of these countries. EU-OSHA will monitor developments with regard to these countries.

The following is an incomplete list, not in priority order, of ongoing EU OSHA activities with an international dimension. EU OSHA will continue to:

- Maintain an ongoing dialogue with intergovernmental organisations, particularly the ILO, ISSA, and WHO.
- Interact with key non-intergovernmental organisations, particularly professional and social partner organisations such as ICOH and IALI.
- Interaction with identified regional organisations and networks
- Welcome visitors to EU OSHA (at their own cost) to share knowledge. In the past, visits have been received from organisations such as KOSHA (Korea).
- Support international activities led by international organisations that aim to achieve common occupational safety and health goals (e.g. the Global OSH Coalition, Vision Zero).
- Collaborate on an ad hoc basis at a thematic/project level with competent authorities in third countries. Such collaboration has included knowledge sharing on survey methodologies and on specific themes (e.g. demographic change).
- Support existing and planned EU initiatives with international actors. In the past, this has included support to European Commission engagement with China, Taiwan, Canada, the United States, and international organisations via the International Chemical Safety Cards Project.
- Provide access to EU OSHA material by non-Member States. For example, where third countries have requested to use Agency publications with appropriate acknowledgements.

2.3 Limitations on engagement

When establishing co-operation agreements with third-country competent authorities and international organisations, EU OSHA must have the authorisation of the Management Board, approval of the European Commission, must include the activities in the relevant planning documents, and must not create legal obligations on the European Union or the Member States.

The number of actors with whom EU-OSHA could usefully interact is considerable, and it is not feasible for the Agency to engage with all. Therefore, there is a need for EU-OSHA to prioritise its engagement and restrict its involvement taking into account the limitations in available human resources.

3 Resources

EU OSHA has no specific budget for international activities; the Agency follows an activity-based approach to management and budgeting. Resources for international activities are allocated within existing activities such as "Strategic and operational networking" or "Awareness raising" and are included in the planning and reporting documentation accordingly.

Coordination of international activities is carried out by the Network Secretariat reporting to the Executive Director.

4 Associated actions: Current and planned activities (2024 - 2026)

Much of the international work of EU OSHA is reactive, following requests from the Commission, international organisations, and third parties. Such requests may be for visits to EU OSHA, exchange of

information, or provision of speakers to training courses and events. Planned and past reactive activities include:

- Engagement with Taiwan in support of Commission activity; Engagement with Canada in support of Commision activity; Support to Vision Zero activities (e.g. through provision of speakers to online events)
- Support to EU activities on border security (health and safety of border personnel) with Southern Neighbourhood Countries via activities and projects led by FRONTEX and other stakeholders.
- Speakers at course at ILO Training Centre, Turin
- Engagement with the G20 OSH Network in support of Commission activity. The European Commission (DG EMPL) is the official member of this network.

In addition to these reactive actions which are coordinated and reported under strategic and operational networking, there are anticipated activities with international engagement that are aligned with the work programme of the Agency. In particular, there are the activities associated with the Global Occupational Safety and Health Coalition.

4.1 The Global Occupational Safety and Health Coalition

Proposed at the XXI World Congress in 2017 and launched on 12 November 2019 at the Vision Zero Summit, Finland, the Global OSH Coalition is a multi-stakeholder partnership to promote the critical contribution that safe and healthy working environments make to decent work, global health and sustainable development. Its founding partners are:

- International Labour Organization (ILO)
- International Commission on Occupational Health (ICOH)
- European Commission
- European Agency for Safety and Health at Work (EU-OSHA)
- Ministry of Manpower, Singapore
- World Health Organization (WHO) as an observer.

The aim of the coalition is to introduce practical solutions to improve working conditions around the world by implementing the commitments of the UN, the G7 and the G20 countries and the European Union on improving occupational health and safety. EU OSHA, alongside the European Commission, is on the steering committee. EU OSHA is awaiting clarification of future activities of the Global OSH coalition.

4.2 Participation in OSH World Congress

The 2026 OSH world congress host and timing is yet to be announced. EU OSHA will in due course consider the appropriate level of engagement

4.3 Participation at the ICOH International Congress

EU OSHA participates in ICOH congresses. Participation at the congress not only promotes the work of EU OSHA, and the EU OSH approach, it can also provide training opportunities for staff. The next ICOH Congress will be held in 2024 in Morocco at which EU OSHA will be an active participant.

4.4 Participation in WHO's Health in the World of Work Network.

EU-OSHA will participate in WHO's World of Work Network. The goal of the network is to increase access to accurate and relevant information and build a community of collaborative sharing on topics related to health, safety and wellbeing within the world of work. The COVID-19 pandemic has reiterated the critical need for all people and organizations to have timely access to accurate information to make decisions to protect their health and the health of their communities. Stakeholders include leaders in the world of work such as government agencies for health, labour and social protection, business leaders, employers and trade unions, associations of occupational health professionals and others.

5 Annex: Risks in engagement with international actors and mitigating actions

Failure to collaborate effectively (e.g. due to limited resources) may lead to a loss of reputation

- Risk to health and safety of Agency workers on mission due to sudden significant instability (political, environmental, or otherwise),
- In engaging in financial actions (e.g. low value contracts for translation into local languages) there is a risk that some of those with whom EU-OSHA would engage would not follow the financial norms anticipated and associated with European-funded projects, and

In engaging in contribution agreements with DG NEAR there is a risk that due to outside circumstances the Agency could not implement the contribution agreement as foreseen.

Such risks can be mitigated by:

- On-going dialogue with informed EU bodies (e.g. DG EMPL, DG NEAR), seeking "early warning" where possible and following guidelines for engagement from these institutions,
- Including in the planning for specific projects where there is international engagement, an assessment of risks
- Having in place appropriate risk assessment, prevention, and recovery procedures for staff on mission,
- Minimising financial engagement and maintaining financial control (e.g. by purchase of flight tickets on behalf of participants to a seminar),
- Involving also the relevant department of the Ministries of Foreign affairs and the Representations to Brussels of the countries when establishing co-operation, and
- Using the experience of and cooperating with existing global networks such as ILO and WHO, which have already established offices or are involved in EU funded projects in these countries.

Annex XV – ICT expenditure 2024

Due to limitations in appropriations, all requests 2024 for ICT expenditure are not met in the budget 2024.

Should appropriations be made available in the course of the budget year, following IT items might be committed, on the administrative budget:

- Cybersecurity improvements (up to 100 k€)
- Infrastructure improvements (up to 100 k€)
- ICT advices (up to 100 k€)
- Additional licences (up to 100 k€)
- Additional equipment (up to 100 k€)
- Websites convergences (up to 100 k€)
- DevSecOps projects (up to 100 k€)
