

Online interactive Risk Assessment (OiRA)

Every year many work-related deaths, accidents and diseases could be avoided by carrying out a proper safety and health risk assessment.

It is well established that micro and small enterprises (MSEs) are particularly challenged when it comes to securing good and sound occupational safety and health (OSH) and that they therefore have special needs when it comes to improving OSH in general.

What is OiRA?

OiRA (Online interactive Risk Assessment) is a web-based platform solution put at the disposal of MSEs to help them assess and manage occupational safety and health risks in a wide range of sectors.

How can OiRA help?

At company level:

- easily identify safety and health risks in the workplace
- take appropriate preventive measures
- improve working conditions and become more competitive

At national and sectoral levels:

- put practical OiRA tools at the disposal of micro and small organisations and promote their use
- contribute to national objectives aimed at reducing occupational diseases and workplace accidents

At European level:

- increase occupational safety and health (OSH) awareness among micro and small enterprises (MSEs)
- pool efforts and resources to better reach and support MSEs
